

Plant Kingdom

Fungi, monerans, protists were earlier included in plant Kingdom but not now. BGA is not an algae anymore

Earlier systems were based on gross morphology like habitat, colour, no. & shape of leaf

Based mainly on vegetative characters (easily affected) or on the androecium structure. Eg- Linnaeus classification of plants based on no. Of androecium. It had drawbacks like it separated closely related species, were based on few characters & equal weightage given to vegetative & sexual characters.

Based on natural affinities among organisms & consider external, internal, ultra structure, anatomy, embryology, photochemistry. Eg- George Bentham & Joseph Dalton Hooker classification of flowering plants

Most acceptable, based on evolutionary relationships, organisms belonging to same taxa have common ancestor.

Based on observable characters using computers(no. & codes are assigned to each character) **each** character is given equal importance.

Based on chromosome no., structure, behaviour

Chemical constituents of the plant to resolve confusions

They are chlorophyll bearing simple thalloid, autotrophic & largely aquatic (both fresh & marine) org. Some algae form association with fungi (lichen), with animals (on sloth bear)

They fix 1/2 of the total CO₂. They are primary producers & is energy source for aquatic animals. Eg- PORPHYRA, LAMINARIA, SARGASSUM are used as food. Algin (brown algae) & carrageen (red algae) produce hydrocolloids (water holding subst.). Agar is produced from Gelidium & Gracilaria. Chlorella and spirulina are used as space food (SCP-Single cell protein).

Chlamydomonas(microscopic unicellular), volvox(colonial), ulothrix & spirogyra(filamentous), kelps(massive marine form)

By fragmentation.
Each fragment
develops into thallus.

By production of zoospores (motile)

By fusion of 2 gametes

Gametes are similar in size

- 1) if motile- *chlamydomonas*
- 2) if nonmotile- *spirogyra*

Gametes are different in size but of same capability to move
Eg- some species of chlamydomonas i.e. Uldorina

Female gamete is non motile but male is motile
Eg- volvox, fucus
