Cancer Metabolism: Molecular Targeting and Implications for Therapy

Shanmugasundaram Ganapathy-Kanniappan,2017-11-03 Development of an effective anticancer therapeutic necessitates the selection of cancer related or cancer specific pathways or molecules that are sensitive to intervention Several such critical yet sensitive molecular targets have been recognized and their specific antagonists or inhibitors validated as potential therapeutics in preclinical models Yet majority of anticancer principles or therapeutics show limited success in the clinical translation Thus the need for the development of an effective therapeutic strategy persists Altered energy metabolism in cancer is one of the earliest known biochemical phenotypes which dates back to the early 20th century The German scientist Otto Warburg and his team Warburg Wind Negelein 1926 Warburg Wind Negelein 1927 provided the first evidence that the glucose metabolism of cancer cells diverge from normal cells This phenomenal discovery on deregulated glucose metabolism or cellular bioenergetics is frequently witnessed in majority of solid malignancies Currently the altered glucose metabolism is used in the clinical diagnosis of cancer through positron emission tomography PET imaging Thus the deregulated bioenergetics is a clinically relevant metabolic signature of cancer cells hence recognized as one of the hallmarks of cancer Hanahan and Weinberg 2011 Accumulating data unequivocally demonstrate that besides cellular bioenergetics cancer metabolism facilitates several cancer related processes including metastasis therapeutic resistance and so on Recent reports also demonstrate the oncogenic regulation of glucose metabolism e g glycolysis indicating a functional link between neoplastic growth and cancer metabolism Thus cancer metabolism which is already exploited in cancer diagnosis remains an attractive target for therapeutic intervention as well The Frontiers in Oncology Research Topic Cancer Metabolism Molecular Targeting and Implications for Therapy emphasizes on recent advances in our understanding of metabolic reprogramming in cancer and the recognition of key molecules for therapeutic targeting Besides the topic also deliberates the implications of metabolic targeting beyond the energy metabolism of cancer The research topic integrates a series of reviews mini reviews and original research articles to share current perspectives on cancer metabolism and to stimulate an open forum to discuss potential challenges and future directions of research necessary to develop effective anticancer strategies Acknowledgment I sincerely thank the Frontiers for providing the opportunity and constant support throughout the process of this research topic and eBook production I gratefully acknowledge all the authors for their valuable contributions Finally I would like to thank my brother Saravana Kumar G K whose personal sacrifices and unflinching encouragement made my career in science possible References Hanahan D Weinberg RA 2011 Hallmarks of cancer The next generation Cell 144 5 646 74 Warburg O Wind F Negelein E 1926 ber den stoffwechsel der tumoren in k rper Klinische Wochenschrift 5 829 32 Warburg O Wind F Negelein E 1927 The metabolism of tumors in the body J Gen Physiol 8 6 519 30 [Resources in Education](#) ,1992-10
