

Format:
20 Multiple choice

Reflex:

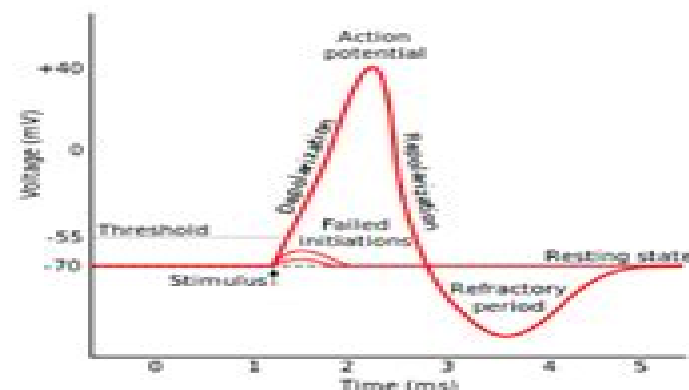

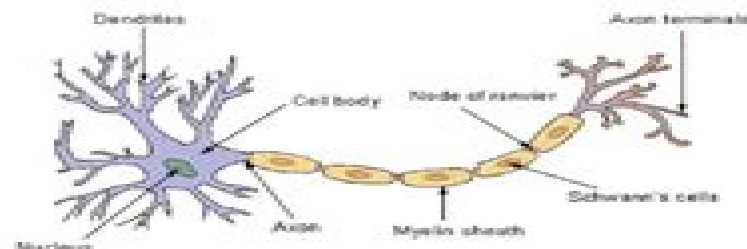

- Explain a reflex arc, be able to predict if something would get interrupted in a reflex arc what the results would be.
- Explain how a reflex arc is different than processing other stimuli.
 - a reflex arc does not travel all the way to the brain for processing
 - reflex arcs are the same in all humans; we all react the same way

Neuron:

- Know the directionality of a neuron transmitting information.
 - the neuron transmits info from its dendrites on the soma, down the axon (saltatory conduction), to the synaptic terminal and to the synapse
- Recognize the structure of the neuron.
- Explain how a neuron at rest has -70 mV
 - the neuron has more sodium ions outside the cell, has more potassium ions inside the cell (salty banana)
 - some sodium ions leak into the cell and some potassium ions leak out through ion channels, but sodium potassium pump helps to maintain the resting potential by actively transporting 3 sodiums out and 2 potassiums back in
- Explain what occurs in an excitatory and inhibitory nerve impulse.
 - Inhibitory:
 - hyperpolarization
 - opens K^+ ion channels
 - Excitatory:
 - depolarization
 - opens Na^+ ion channels
 - Inhibitory and excitatory impulses can cancel each other out
- Explain what would happen if there was damage to the K^+ channels, Na^+ channels or K^+/Na^+ pump
 - Damage to K^+ channels
- Explain the graph of an excitatory nerve impulse. Know what occurs at each point
 - resting potential: everything is normal at -70 mV. Sodium potassium pump is taking out 3 sodium, bringing in 2 potassium. channels are closed. Outside of cell is more positive than inside of cell.
 - stimulus: must reach threshold of -55 mV for an action potential
 - depolarization: sodium channels open, sodium flows in, membrane voltage rises
 - repolarization: potassium channels open, potassium flows in, sodium channels inactivate, membrane voltage falls
 - refractory period/hyperpolarization: the membrane voltage falls below resting potential, potassium channels close slowly, sodium channels close. Sodium potassium pump reestablishes resting potential.
- Explain how neurotransmitters are released from the synaptic terminal.
 - the action potential reaches terminal, causing influx of calcium from sarcoplasmic reticulum
 - synaptic vesicles fuse with the synaptic terminal membrane, releasing neurotransmitters
- Know: depolarization, repolarization and hyperpolarization/undershoot

Neurotransmitters:

- Explain what occurs when the receptor for a neurotransmitter is blocked.
 - the reaction cannot take place
 - buildup of neurotransmitters
- Explain how neurotransmitters travel across the synapse.
 - depolarization arrives at the synaptic terminal
 - the Ca^{2+} gated ion channels open, influx of calcium into neuron
 - calcium causes exocytosis of synaptic vesicles
 - the vesicles release neurotransmitters into the synapse
- You will receive description of various neurotransmitter functions and asked to make a prediction what would happen if they are inhibited, mimicked, or degraded to early ecetera. These are very application based.
 - Acetylcholine
 - Transmits signal to skeletal muscle
 - Muscle stimulation
 - Memory formation
 - Learning

Martin,Bryan Rynne,2012-12-06 This volume consists of survey articles on current topics in computational wave propagation and inverse problems written by leading experts in their respective fields The idea to compile such a volume arose in conjunction with the LMS Durham Symposium on Computational Methods for Wave Propagation in Direct Scattering held at the University of Durham from 15th 25th July 2002 which we jointly organised The meeting attended by 70 participants from the UK and overseas was structured around a number of short three lecture survey courses on a range of topics on computational wave propagation and inverse problems beginning at the level of a graduate student We were delighted to secure the participation of distinguished international researchers to present these lectures We felt that it would be valuable to record this material for the benefit of a wider audience and the idea was hatched that the individual lecturers should be invited to contribute a survey article Fortunately many of the speakers not only agreed to undertake this arduous task but produced what we hope you will agree are the high quality contributions found in this volume Finally it is a pleasure to thank the Engineering and Physical Sciences Research Council of Great Britain and the London Mathematical Society for providing the generous support that allowed the meeting to take place Mark Ainsworth Glasgow 2003 Penny Davies Dugald Duncan Paul Martin Bryan Rynne Contents New Results on Absorbing Layers and Radiation Boundary Conditions Thomas Hagstrom

Klir,2013-11-21 This book has a rather strange history It began in Spring 1989 thirteen years after our Systems Science Department at SUNY Binghamton was established when I was asked by a group of students in our doctoral program to have a meeting with them The spokesman of the group Cliff Joslyn opened our meeting by stating its purpose I can closely paraphrase what he said We called this meeting to discuss with you as Chairman of the Department a fundamental problem with our systems science curriculum In general we consider it a good curriculum we learn a lot of concepts principles and methodological tools mathematical computational heuristic which are fundamental to understanding and dealing with systems And yet we learn virtually nothing about systems science itself What is systems science What are its historical roots What are its aims Where does it stand and where is it likely to go These are pressing questions to us After all aren't we supposed to carry the systems science flag after we graduate from this program We feel that a broad introductory course to systems science is urgently needed in the curriculum Do you agree with this assessment The answer was obvious and yet not easy to give I agree of course but I do not see how the situation could be alleviated in the foreseeable future **Biology in America** Robert Thompson Young,1922 Neuroscience Mark F.
