Natural Sciences Summary

Grade 8 – Term 1

Photosynthesis

Energy sustains life

- The need for energy to sustain life drives the interactions in ecosystems.
- All living things need energy for life processes, such as growing and moving, as well as staying warm.
- The Sun is the source of energy in ecosystems.
- It provides energy in the form of heat and light.

Plants capture light energy from the Sun

- Plants use light energy from the Sun to combine carbon dioxide from the air and water from the soil to produce glucose, a form of food.
- This process is called photosynthesis and takes place as a series of chemical reactions.
- Oxygen is released into the air as a by-product.
- A by-product is a waste product, or a product made while making something else.
- We can summarize the process of photosynthesis as follows:

Chlorophyll

- Chlorophyll is a special substance in plants that absorbs light energy from the Sun and turns it into a form that the plant can use.
- It is chlorophyll that gives plants their green color.

Plants turn glucose into starch and other things

- Glucose is a sugar and the simplest form of food.
- Plants turn glucose into starch, cellulose and other chemical compounds that they need for processes such as reproduction and growth.
- Starch is a food or energy store.
- There is a lot of starch in seeds.
- Cellulose is the main building material of plants.
- Wood consists of approximately 50% cellulose and cotton lint 90%.

What makes written words so special to the brain? Gui Xue,Urs Maurer,Mohamed L Seghier,2015-01-22

Reading is an integral part of life in today's information driven societies Since the pioneering work of Dejerine on word blindness in brain lesioned patients the literature has increased exponentially from neuropsychological case reports to mechanistic accounts of word processing at the behavioural neurofunctional and computational levels tapping into diverse aspects of visual word processing These studies have revealed some exciting findings about visual word processing including how the brain learns to read how changes in literacy impact upon word processing strategies and whether word processing mechanisms vary across different alphabetic logographic or artificial writing systems Other studies have attempted to characterise typical and atypical word processes in special populations in order to explain why dyslexic brains struggle with words how multilingualism changes the way our brains see words and what the exact developmental signatures are that would shape the acquisition of reading skills Exciting new insights have also emerged from recent studies that have investigated word stimuli at the system network level by looking for instance at how the reading system interacts with other cognitive systems in a context dependent fashion how visual language stimuli are integrated into the speech processing streams how both left and right hemispheres cooperate and interact during word processing and what the exact contributions of subcortical and cerebellar regions to reading are The contributions to this Research Topic highlight the latest findings regarding the different issues mentioned above particularly how these findings can explain or model the different processes mechanisms pathways or cognitive strategies by which the human brain sees words The introductory editorial summarising the contributions included here highlights how varieties of behavioural tests and neuroimaging techniques can be used to investigate word processing mechanisms across different alphabetic and logographic writing systems

Navarro, Victor Yepes,Jose V. Mart, Essential infrastructures such as bridges are designed to provide a long lasting and intergenerational functionality In those cases sustainability becomes of paramount importance when the infrastructure is exposed to aggressive environments which can jeopardise their durability and lead to significant maintenance demands The assessment of sustainability is however often complex and uncertain The present study assesses the sustainability performance of 16 alternative designs of a concrete bridge deck in a coastal environment on the basis of a neutrosophic group analytic hierarchy process AHP The use of neutrosophic logic in the field of multi criteria decision making as a generalisation of the widely used fuzzy logic allows for a proper capture of the vagueness and uncertainties of the judgements emitted by the decision makers TOPSIS technique is then used to aggregate the different sustainability criteria From the results it is derived that only the simultaneous consideration of the economic environmental and social life cycle impacts of a design shall lead to

adequate sustainable designs Choices made based on the optimality of a design in only some of the sustainability pillars will lead to erroneous conclusions The use of concrete with silica fume has resulted in a sustainability performance of 46.3% better than conventional concrete designs **U.
