

Chapter 9 THE HUMAN POPULATION

Section 1: Studying Human Populations - Part I

E.Q.: How has the human population growth changed over time and what are the properties that scientists uses to study human populations?

Objectives

- **Describe how the size and growth rate of the human population has changed in the last 200 years.**
- **Define four properties that scientists use to predict population sizes.**
- **Make predictions about population trends based on age structure.**
- **Describe the four stages of the demographic transition.**
- **Explain why different countries may be at different stages of the demographic transition.**

Studying Human Populations

- **Demography is the study of the characteristics of populations, especially human populations.**
- **Demographers study the historical size and makeup of the populations of countries to make comparisons and predictions.**
- **Demographers also study properties that affect population growth, such as economics and social structure.**
- **Countries with similar population trends are often grouped into two general categories: developed and developing countries.**

Quiz Version 1 Section Studying Human Populations:

Studying Human Populations Nicholas T. Longford, 2007-12-24 Studying Human Populations is a textbook for graduate students and research workers in social statistics and related subject areas. It follows a novel curriculum developed around the basic statistical activities of sampling measurement and inference. Statistics is defined broadly as making decisions in the presence of uncertainty that arises as a consequence of limited resources available for collecting information. A connecting link of the presented methods is the perspective of missing information catering for a diverse class of problems that include nonresponse imperfect measurement and causal inference. In principle any problem too complex for our limited analytical toolkit could be converted to a tractable problem if some additional information were available. Ingenuity is called for in declaring such missing information constructively but the universe of problems that we can address is wide open not limited by a discrete set of procedures. The monograph aims to prepare the reader for the career of an independent social statistician and to serve as a reference for methods ideas for and ways of studying human populations formulation of the inferential goals design of studies search for the sources of relevant information analysis and presentation of results. Elementary linear algebra and calculus are prerequisites although the exposition is quite forgiving especially in the first few chapters. Familiarity with statistical software at the outset is an advantage but it can be developed concurrently with studying the text.
