Bush, Thomas A.

Martin, 2005-10-10 The text provides a lifespan developmental approach to neuropsychology. It addresses the many issues in neuropsychological assessment that differ between younger and older adults. It describes the symptoms, neuropathology, diagnostic considerations, and treatment options of common neurological disorders associated with aging. It also addresses special considerations related to geriatric neuropsychology such as ethical issues, family systems issues, decision making, capacity, cultural consideration, and medical medication substance use issues. Additionally, a list of resources for the elderly and their families is also provided. *Validity Assessment in Clinical Neuropsychological Practice* Ryan W. Schroeder, Phillip K. Martin, 2021-09-20 Practical and comprehensive, this is the first book to focus on noncredible performance in clinical contexts. Experts in the field discuss the varied causes of invalidity, describe how to efficiently incorporate validity tests into clinical evaluations, and provide direction on how to proceed when noncredible responding is detected. Thoughtful ethical guidance is given for offering patient feedback and writing effective reports. Population-specific chapters cover validity assessment with military personnel, children, and individuals with dementia, psychiatric disorders, mild traumatic brain injury, academic disability, and other concerns. The concluding chapter describes how to appropriately engage in legal proceedings if a clinical case becomes forensic. Case examples and sample reports enhance the book's utility. **A Handbook of Geriatric Neuropsychology** Shane S. Bush, Brian P. Yochim, 2022-07-12 *A Handbook of Geriatric Neuropsychology: Practice Essentials*, Second Edition, brings together experts in the field to integrate the knowledge and skills needed to understand and treat older adults who are experiencing problems with memory and other thinking skills. With three new sections including coverage of other conditions beyond neuropsychological disorders, special assessment contexts, and more on interventions and ethics, as well as multiple new chapters and significant updates from the first edition, this book provides a strong foundation for clinicians, educators, and researchers invested in the wellbeing of older adults. The impact and experience of aging, like the practice of neuropsychology, evolves over time. Similarly, through advances in science and professional techniques, neuropsychological practice has continued to evolve. Neuropsychological evaluation remains the most effective method of diagnosing age-related cognitive decline, cognitive difficulties that result from psychological factors, and other related disorders, as well as determining how the various disorders impact functioning and quality of life. This book explores these areas and offers state-of-the-art assessment techniques to assess changes in cognition and behavior and to distinguish normal changes from neuropathology. This book is a go-to resource and key reference for psychologists who serve older adults with known or suspected cognitive problems, as well as those who are invested in promoting brain wellness. It provides much of the information needed to establish and improve foundational and functional competencies in geriatric neuropsychology and establish practices that are personally and professionally rewarding, all aimed at promoting the understanding and wellbeing of older adults. *Neurorehabilitation in Parkinson's Disease* Marilyn Trail, Elizabeth Protas, Eugene C. Lai, 2008 *Neurorehabilitation in Parkinson's Disease* serves as a reference for the treatment of patients.

with Parkinson's disease. In addition to providing treatment models for physical therapy, occupational therapy, speech language pathology, the text covers topics such as review of pathophysiology, symptomatology. *Traumatic Brain Injury* Robert P. Granacher, Jr., 2015-03-02. *Traumatic Brain Injury: Methods for Clinical and Forensic Neuropsychiatric Assessment* Third Edition provides physicians and psychologists with a scientifically based schema for the clinical evaluation of traumatic brain injury (TBI). The book assists physicians and psychologists in developing treatment plans for patients who have sustained TBIs and also guides those providing forensic analysis to lawyers, insurance bodies, workers' compensation systems, triers of fact, and other stakeholders in the adjudication of victims of TBI. The procedures and recommendations in this book are grounded in highly referenced evidence-based science but also come from more than 5000 cases wherein the author and contributors have personally examined individuals who have sustained a TBI or who claim to have sustained a TBI. This edition has been entirely rewritten. The style now follows a more traditional neuropsychiatric format than previous editions. Since the last edition, there has been increased awareness and scientific study regarding the effects of blast brain injury as a consequence of US military experiences in Afghanistan and Iraq. There is also increased interest in the phenomenology of mild traumatic brain injury and in particular the forensic complications associated with evaluations of this disorder. Chronic traumatic encephalopathy has also received significant scrutiny in the last decade, possibly associated with sports injuries. This book is a comprehensive resource for clinicians treating patients as well as for forensic specialists. Its purpose remains the same as in prior editions: to provide physicians or psychologists with a practical method for an effective evaluation of TBI based upon known scientific principles of brain-behavior relationships and state-of-the-art clinical neuroimaging, neuropsychological, and psychological techniques. **Massachusetts General Hospital Handbook of General Hospital Psychiatry E-Book** Theodore A.
