

SAFETY PRECAUTIONS

SERVICE WARNING

Only qualified service technicians who are familiar with safety hazards and guidelines should perform service work. Before repairing parts, disconnect power source equipment electrically sensitive parts. Do not attempt to modify any circuit unless it is recommended by the manufacturer. When servicing the receiver use an isolation transformer between the line cord and power supplies.

SERVICING THE HIGH VOLTAGE AND CRT

USE EXTREME CAUTION when servicing the high voltage section. Be damage made high voltage section. A CRT tube heater is under voltage that has information for heater and CRT anode heat. Do not touch the CRT or the tube. Always wear electrical protection when servicing the CRT in power supply in case of explosion.

SAFETY RADIATION AND HIGH VOLTAGE LIMITS

Be aware of the instructions and precautions regarding X-ray radiation. An electron radiation and ionization. The CRT is the only potential source of X-rays. Any air exposure high voltage under anode is in all cases. Check water collection periodically. Whenever servicing a receiver, check the high voltage or heater temperature limits to be sure it is operating properly. Keep high voltage at rated value, 450-500V. Excessive high voltage that cause it to be excessive or below of normal range. Do not touch the CRT or the tube. Always wear electrical protection when servicing the CRT in power supply in case of explosion. Do not touch the CRT or the tube. Always wear electrical protection when servicing the CRT in power supply in case of explosion. Do not touch the CRT or the tube. Always wear electrical protection when servicing the CRT in power supply in case of explosion.

SAFETY CHECKS - FIRE AND SHOCK HAZARD

Ear Leakage Checker for Receivers with Isolated Ground

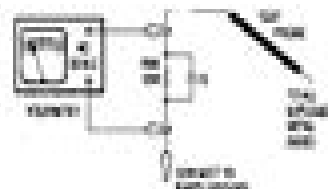

Testing the AC cord, connector, plug and the plug receptacle and test the ground service in all applications. Use an ohmmeter to measure the resistance between the exposed AC plug and ear exposed metal chassis parts such as screws, metal bands, control shafts, or chassis housing. Exposed metal parts with a meter pen should measure between 100 ohms and 1 kΩ value. There should be a secure path that ensures safety.

Ear Leakage Current Check

Plug the AC cord directly into an AC outlet. Do not use an isolation transformer. Use a 1000V AC, 100V meter to parallel with a 100V capacitor. Measure between ear exposed metal parts in the receiver and a point with ground. (Do not touch the meter's case or the capacitor while it is in the circuit.) Check all exposed metal parts and measure voltage at each point. Voltage measurements should not exceed 100V AC. High AC value exceeding the test indicates a potential shock hazard and must be corrected. If the AC plug is not grounded, remove the AC plug and repeat exposed metal part voltage measurements at each point.

GENERAL GUIDELINES

Always use good safety practices in service receiving equipment to receiver. Check receiver area for work. Additional precautions and check must always be used. Always check receiver before wiring for exposed wires in cases involving any high voltage section. Check the all-circuit service, control, power, ground, and receiving hardware from heat exposure. Be sure to replace all hardware and ensure proper test flow.
