Abstract

Only qualified service technicians who are familiar with safety checks and guidelines should perform service work. Before attempting parts, structural repairs, or other work to prevent electrocutionally sensitive parts, be sure always to install any control system or equipment to the manufacturer's plans, including the service area or interface instructions between the two connected system components.

Use an ohmmeter to measure the resistance between the exposed AC plug and the exposed metal exterior parts such as terminals, knobs, control shafts, or switch blades. Exposed metal parts with a short path should measure between 100 ohms and 1,000 ohms. There will be a series path, not a direct path.
