Good Manufacturing Practices for Pharmaceuticals Joseph D. Nally, 2016-04-19 With global harmonization of regulatory requirements and quality standards and national and global business consolidations ongoing at a fast pace pharmaceutical manufacturers suppliers contractors and distributors are impacted by continual change Offering a wide assortment of policy and guidance document references and interpretations this Sixth Edition is significantly expanded to reflect the increase of information and changing practices in CGMP regulation and pharmaceutical manufacturing and control practices worldwide An essential companion for every pharmaceutical professional this guide is updated and expanded by a team of industry experts each member with extensive experience in industry or academic settings *The Patient's Guide to Preventing Medical Errors* Karin J. Berntsen, 2004-10-30 A nation watched in horror as 17 year old Jessica Santillian died needlessly after a heart lung transplant in 2003 She had been given organs with the wrong blood type That error killed her It is just one among tens of thousands of less publicized errors that occur in U S hospitals each year Author Karin Berntsen a veteran of the hospital and health care industry takes us through the headlines and the events never publicized into hospital wards and surgical rooms to see how errors are made causing disability or death She gives graphic examples of actual events that illustrate the problems cited in a federal Institute of Medicine report showing medical errors in the hospital cause 44 000 to 98 000 deaths each year Those errors include medication mistakes wrong site or side surgery and botched transfusions Berntsen explains why these are not just human errors with one or two people responsible they are systems failures that require a major culture change to remedy And that change she argues may not come without action by the very people the medical system is designed to help patients She offers clear actions consumers can take to assure they are not on the receiving end of a medical error The book details over 200 tips for improving patient safety U S hospitals have countless stories of miraculous healing and recovery the greatest technology most advanced medicines and best research in the world On the other hand we have a system where medical errors bring more than 120 fatalities each day across the country in hospitals An airline crash causing that many deaths daily would paralyze that industry But because the deaths and harm are diluted across and deep within the silence of hospitals it is easier to be complacent There is says Berntsen an urgent need to pause and take inventory a need for clinicians and consumers to come together as partners for change Certifications of Critical Systems - The CECRIS Experience Andrea Bondavalli, Francesco Brancati, 2022-09-01 In recent years a considerable amount of effort has been devoted both in industry and academia to the development validation and verification of critical systems i e those systems whose malfunctions or failures reach a critical level both in terms of risks to human life as well as having a large economic impact *Certifications of Critical Systems The CECRIS Experience* documents the main insights on Cost Effective Verification and Validation processes that were gained during work in the European Research Project CECRIS acronym for Certification of Critical Systems The objective of the research was to tackle the challenges of certification by

focusing on those aspects that turn out to be more difficult important for current and future critical systems industry the effective use of methodologies processes and tools The CECRIS project took a step forward in the growing field of development verification and validation and certification of critical systems It focused on the more difficult important aspects of critical system development verification and validation and certification process Starting from both the scientific and industrial state of the art methodologies for system development and the impact of their usage on the verification and validation and certification of critical systems the project aimed at developing strategies and techniques supported by automatic or semi automatic tools and methods for these activities setting guidelines to support engineers during the planning of the verification and validation phases
