coronary artery bypass graft surgery has irrefutably improved the quality of life of many patients However we are confronted

with the finding that women exhibit a higher mortality rate than men. In part this difference can be explained by clinical parameters such as age, disease severity or comorbidity factors that have been well studied but which do not fully explain the observed differences. This is one reason why in recent years psychosocial variables have attracted special attention in this context. In fact, women and men having undergone a bypass operation vary a great deal with respect to e.g. depression, partner status and socio-economic status. Moreover, psychological well-being on the one hand and social isolation on the other hand definitely influence the recovery process, particularly when considered under the gender aspect. The Deutsches Herzzentrum Berlin has been actively supporting gender-specific research for many years. In this context, a large prospective study on gender differences in recovery after bypass surgery carried out by the Competence Network of Heart Failure was started at our Department for Cardiothoracic and Vascular Surgery. From the beginning of the study, psychosocial variables were included as being substantial contributors. The starting point of the study presented here by psychologist Dr. Friederike Kendel are recent empirical investigations about gender differences in coronary heart disease and the course of recovery after bypass surgery.

Depression in New Mothers Kathleen A. Kendall-Tackett, 2009-12-04. Depression is the number one cause of maternal death in developed countries and results in adverse health outcomes for both mother and child. It is vital therefore that health professionals are ready and able to help those women that suffer from perinatal and postpartum depression (PPD). This book provides a comprehensive approach to treating PPD in an easy-to-use format. It reviews the research and brings together the evidence base for understanding the causes and for assessing the different treatment options, including those that are safe for use with breastfeeding mothers. It incorporates a new psychoneuroimmunology framework for understanding postpartum depression and includes chapters on negative birth experiences, infant characteristics, psychosocial factors, antidepressant medication, therapies such as cognitive behavioural therapy, herbal medicine and alternative therapies, suicide and infanticide. Invaluable in treating the mothers who come to you for help, this helpful guide dispels the myths that hinder effective treatment and presents up-to-date information on the impact of maternal depression on the health of the mother as well as the health and well-being of the infant.
