OPERATION MANUAL

IMPORTANT PRECAUTIONS

- The following precautions will help to prevent possible damage to the Millennium Pro, the battery pack, or the input power source.
- **Charge only nickel-cadmium or nickel-metal hydride rechargeable battery packs.** Damage will occur from charging other battery types (lead-acid, NiMH, etc.).
 - **Never allow water, moisture, or other foreign materials to enter Millennium Pro.**
 - **Do not use automobile battery chargers to power the Millennium Pro.** False peaks can occur, and excessive voltage spikes can damage the Millennium Pro.
 - **Do not obstruct the air intake on the bottom of the Millennium Pro.** This will cause overheating and thermal shut down. Be careful if putting Millennium Pro on a pit towel.
 - **Do not charge batteries with fewer than 4 or more than 8 cells—connected in series.**
 - **Do not charge battery packs connected in parallel.** Batteries will be damaged.
 - **Enhanced voltage ("boost") batteries charge erratically.** Consult the battery matching company for charging recommendations.
 - **Excessive charge current can damage batteries.** Follow battery maker recommendations.
 - **Never exceed 35 volts DC input power source to power the Millennium Pro.**
 - **Gases from a lead-acid battery may ignite if sparks occur when connecting or disconnecting the Millennium's alligator clips.** Using a lead-acid battery as a power source may generate hydrogen gas and should only be used in a well ventilated area. Avoid open flames and sparks which may ignite battery gases.

PLEASE FOLLOW ALL INSTRUCTIONS CAREFULLY

INPUT POWER SOURCE VOLTAGE & CONNECTION

Input power source voltage should be 1.5 volts DC above peak-voltage of the battery.
Example 1: (6 cell Ni-Cd pack peak-voltage: 10.5 volts) + (1.5 volts) = 12 volts DC
Example 2: (8 cell NiMH pack peak-voltage: 11.5 volts) + (1.5 volts) = 13 volts DC
Remember that older battery packs are higher voltages.

If power source's voltage is not high enough to peak battery, charge 4 cell packs in two, 4 cell packs.
Input power source connection on the Millennium Pro is located on the lower corner of the back of the case. The supplied power harness has a matching connector attached to it, and will plug directly to the panel-mounted connector on the back of the Millennium Pro. When looking at the input power connector, the pin marked with a raised rib in the plastic is the positive (+) connection as shown below.

Acceptable input power sources: DC power supply* or lead-acid battery**

*Output current of power source should meet/exceed desired charge rate.
**Connect input power harness to lead-acid battery before connecting harness to Millennium Pro.
If using Millennium Pro with power supply, cut wires of included input power harness to the desired length and secure them to the output terminal screws of the power supply.
If your power supply has post-style output terminals, or if using Millennium Pro with a lead-acid battery, you can solder the included alligator clips to the input power harness. Solder the red alligator clip to the wire that goes to the Millennium Pro's positive (+) pin (rib in plastic of connector). Solder the black alligator clip to other wire.
