The Institute Reynold Macpherson, 2015-07-21 The Institute of Inspectors of Schools of New South Wales was established on 14 January 1914 It incorporated the traditions of the inspectorial system developed by William Wilkins the first permanent district superintendent and inspector of schools appointed by the National Board of Education on 1 July 1854 Although the inspectorate was abolished on 1 April 1990 the Institute of Senior Educational Administrators continued to provide industrial coverage for chief education officers and to serve as their professional association This history is a sociological and political examination of an organizational entity and the power it exerted in NSW public education over the last 100 years

Monitoring endogenous GPCRs: lessons for drug design Dominique Massotte, 2015-10-07 G protein coupled receptors GPCRs are integral membrane proteins forming the fourth largest superfamily in the human genome Many of these receptors play key physiological roles and several pathologies have been associated with receptor functional abnormalities GPCRs therefore represent important goals for drug design in pharmaceutical companies since they constitute the target of about one third of the drugs currently on the market However endogenous GPCRs are most often difficult to study because of a lack of tools to target them specifically and single out their response to physiological or drug elicited stimulations Hence studies mostly focused on recombinant receptors expressed in a variety of cellular models that do not

always closely reflect the receptor natural environment and often deal with levels of expression exceeding by far physiological ranges Recent technological developments combining for example genetically modified animals and advanced imaging approaches have improved our ability to visualize endogenous GPCRs To date trailing receptor activation subsequent intracellular redistribution changes in signaling cascade up to integrated response to a drug elicited stimulation is at hand though the impact of a physiological challenge on receptor dynamics remains a major issue Data however suggest that the receptor may embrace a different fate depending on the type of stimulation in particular if sustained or repeated This suggests that current drugs may only partially mimic the genuine response of the receptor and may explain at least in part their secondary effects Commonalities and specificities between physiological and drug induced activation can thus represent valuable guidelines for the design of future drugs

The G20 and the Future of International

Economic Governance Mike Callaghan,Tristram Sainsbury,2015-10-01 The G20 needs to be bold and pragmatic if it is to deal effectively with the global economy s big issues Since its establishment in 1999 the G20 has become a key international forum But it suffers from inherent design flaws and remains a work in progress When Australia began its presidency of the 2014 summit in Brisbane many commentators suggested that Australia s chairing of the G20 would reinvigorate it This timely book looks at what was achieved at the Brisbane Summit and what has happened in its wake Crucially it explores what role the G20 could and should play in dealing with such pressing global issues as international taxation trade energy and climate change Expert contributors many of them former inside players assess the impact of the summit in the context of the year s broader geopolitical challenges including Russia s temporary expulsion from the G8 and the failure of the US to ratify its governance reforms to the IMF Taking stock contributors question the effectiveness of the G20 and identify the reforms that are needed if it is to offer strong leadership in an integrated global economy Together they ask what is the future of the G20 and other Gs

Insight Edge Vivek Banerji,2025-06-25 As Artificial Intelligence reshapes industries one question looms large Where does human ingenuity fit Drawing on decades of experience at organizations such as Insight Dojo McKinsey and PepsiCo Vivek Banerji reveals how to generate powerful insights that drive transformational success for organizations He urges us to embrace the dynamic interplay of art and science imagination and pragmatism theory and practice and to draw inspiration from diverse disciplines whether it is machine learning design statistics psychology music art or sports Insight

Edge makes a compelling case that information alone does not create insight. Instead, it is inherently human qualities—curiosity, analytical thinking, creativity, and empathy—that shape meaningful strategies and drive breakthrough outcomes. With real-world examples and actionable frameworks, this book equips leaders and professionals—CEOs, marketers, customer insights experts, strategists, non-profit executives, entrepreneurs, and data analysts—to move beyond algorithms and tap into the irreplaceable power of human insight.

Unthought N. Katherine Hayles, 2017-04-05 N. Katherine Hayles is known for breaking new ground at the intersection of the sciences and the humanities. In *Unthought*, she once again bridges disciplines by revealing how we think without thinking—how we use cognitive processes that are inaccessible to consciousness yet necessary for it to function. Marshalling fresh insights from neuroscience, cognitive science, cognitive biology, and literature, Hayles expands our understanding of cognition and demonstrates that it involves more than consciousness alone. Cognition, as Hayles defines it, is applicable not only to nonconscious processes in humans but to all forms of life, including unicellular organisms and plants. Startlingly, she also shows that cognition operates in the sophisticated information processing abilities of technical systems. When humans and cognitive technical systems interact, they form cognitive assemblages, as found in urban traffic control, drones, and the trading algorithms of finance. Capital, for instance, and these assemblages are transforming life on earth. The result is what Hayles calls a planetary cognitive ecology, which includes both human and technical actors and which poses urgent questions to humanists and social scientists alike. At a time when scientific and technological advances are bringing far-reaching aspects of cognition into the public eye, *Unthought* reflects deeply on our contemporary situation and moves us toward a more sustainable and flourishing environment for all beings.

The End of Automobile Dependence Peter Newman, Jeffrey Kenworthy, 2015-08-11 Cities will continue to accommodate the automobile, but when cities are built around them, the quality of human and natural life declines. Current trends show great promise for future urban mobility systems that enable freedom and connection but not dependence. We are experiencing the phenomenon of peak car use in many global cities at the same time that urban rail is thriving; central cities are revitalizing and suburban sprawl is reversing. Walking and cycling are growing in many cities along with ubiquitous bike sharing schemes, which have contributed to new investment and vitality in central cities, including Melbourne, Seattle, Chicago, and New York. We are thus in a new era that has come much faster than global transportation experts Peter Newman and Jeffrey Kenworthy had predicted: the end of automobile dependence. In *The End of Automobile Dependence*, Newman and Kenworthy look at how we can accelerate a planning approach to designing urban environments that can function reliably and conveniently on alternative modes, with a refined and more civilized automobile playing a very much reduced and manageable role in urban transportation. The authors examine the rise and fall of automobile dependence using updated data on 44 global cities to better understand how to facilitate and guide cities to the most productive and sustainable outcomes. This is the final volume in a trilogy by Newman and Kenworthy on automobile dependence: *Cities and Automobile Dependence* in 1989 and

Sustainability and Cities Overcoming Automobile Dependence in 1999 Like all good trilogies this one shows the rise of an empire in this case that of the automobile the peak of its power and the decline of that empire Consciousness and Being Robert C. Plutonium Frank von Hippel, Masafumi Takubo, Jungmin Kang, 2019-12-23 This book provides a readable and thought provoking analysis of the issues surrounding nuclear fuel reprocessing and fast neutron reactors including discussion of resources economics radiological risk and resistance to nuclear proliferation It describes the history and science behind reprocessing and gives an overview of the status of reprocessing programmes around the world It concludes that such programs should be discontinued While nuclear power is seen by many as the only realistic solution to the carbon emission problem some national nuclear establishments have been pursuing development and deployment of sodium cooled plutonium breeder reactors and plutonium recycling Its proponents argue that this system would offer significant advantages relative to current light water reactor technology in terms of greater uranium utilization efficiency and that separating out the long lived plutonium and other transuranics from spent fuel and fissioning them in fast reactors would greatly reduce the duration of the toxicity of radioactive waste However the history of efforts to deploy this system commercially in a number of countries over the last six decades has been one of economic and technical failure and in some cases was used to mask clandestine nuclear weapon development programs Covering topics of significant public interest including nuclear safety fuel storage environmental impact and the spectre of nuclear terrorism this book presents a comprehensive analysis of the issue for nuclear engineers policy analysts government officials and the general public Frank von Hippel Jungmin Kang and Masafumi Takubo three internationally renowned nuclear experts have done a valuable service to the global community in putting together this book which both historically and comprehensively covers the plutonium age as we know it today They articulate in a succinct and clear manner their views on the dangers of a plutonium economy and advocate a ban on the separation of plutonium for use in the civilian fuel cycle in view of the high proliferation and nuclear security risks and lack of economic

justification Mohamed ElBaradei Director General International Atomic Energy Agency 1997 2009 Nobel Peace Prize 2005 The 1960s dream of a plutonium economy has not delivered abundant low cost energy but instead has left the world a radioactive legacy of nuclear weapons proliferation and the real potential for nuclear terrorism Kang Takubo and von Hippel explain with power and clarity what can be done to reduce these dangers The governments of the remaining countries whose nuclear research and development establishments are still pursuing the plutonium dream should pay attention Senator Edward Markey a leader in the US nuclear disarmament movement as a member of Congress since 1976 The authors have done an invaluable service by putting together in one place the most coherent analysis of the risks associated with plutonium and the most compelling argument for ending the practice of separating plutonium from spent fuel for any purpose They have given us an easily accessible history of the evolution of thinking about the nuclear fuel cycle the current realities of nuclear power around the world and arguably most important a clear alternative path to deal with the spent fuel arising from nuclear reactors for decades to centuries to come Robert Gallucci Chief US negotiator with North Korea 1994 Dean Georgetown University School of Foreign Service 1996 2009 President MacArthur Foundation 2009 2014

Turbulence Modelling Approaches Konstantin Volkov, 2017-07-26 Accurate prediction of turbulent flows remains a challenging task despite considerable work in this area and the acceptance of CFD as a design tool The quality of the CFD calculations of the flows in engineering applications strongly depends on the proper prediction of turbulence phenomena Investigations of flow instability heat transfer skin friction secondary flows flow separation and reattachment effects demand a reliable modelling and simulation of the turbulence reliable methods accurate programming and robust working practices The current scientific status of simulation of turbulent flows as well as some advances in computational techniques and practical applications of turbulence research is reviewed and considered in the book *Sustaining Human Progress* Khalid Malik, 2014 Most people in most countries have been steadily better in human development Advances in technology and incomes hold ever greater for longer healthier more secure lives Addressing the Challenges in Communicating Climate Change Across Various Audiences Walter Leal Filho, Bettina Lackner, Henry McGhie, 2018-10-02 This book offers a concrete contribution towards a better understanding of climate change communication It ultimately helps to catalyse the sort of cross sectoral action needed to address the phenomenon of climate change and its many consequences There is a perceived need to foster a better understanding of what climate change is and to identify approaches processes methods and tools which may help to better communicate it There is also a need for successful examples showing how communication can take place across society and stakeholders Addressing the challenges in communicating to various audiences and providing a platform for reflections it showcases lessons learnt from research field projects and best practices in various settings in various different countries The acquired knowledge can be adapted and applied to other situations
