Leach, Peter Newell, 2015-01-09 Multiple green transformations are required if humanity is to live sustainably on planet Earth Recalling past transformations this book examines what makes the current challenge different and especially urgent It examines how green transformations must take place in the context of the particular moments of capitalist development and in relation to particular alliances The role of the state is emphasised both in terms of the type of incentives required to make green transformations politically feasible and the way states must take a developmental role in financing innovation and technology for green transformations The book also highlights the role of citizens as innovators entrepreneurs green consumers and members of social movements Green transformations must be both top down involving elite alliances between states and business but also bottom up pushed by grassroots innovators and entrepreneurs and part of wider mobilisations among civil society The chapters in the book draw on international examples to emphasise how contexts matter in shaping pathways to sustainability Written by experts in the field this book will be of great interest to researchers and students in environmental studies international relations political science development studies geography and anthropology as well as policymakers and practitioners concerned with sustainability Handbook of Systems Engineering and Analysis of

Electro-Optical and Infrared Systems William Wolfgang Arrasmith, 2025-06-30 There has been a lot of innovation in systems engineering and some fundamental advances in the field of optics imaging lasers and photonics that warrant attention This volume focuses on applications tools and techniques of systems engineering related topics from government industrial and academic settings such as development and operations DevOps agile methods and the concept of the digital twin Handbook of Systems Engineering and Analysis of Electro Optical and Infrared Systems Applications Tools and Techniques offers more

information on the application of decision and risk analysis and statistical methods in systems engineering such as design of experiments DOX methods including statistical process control hypothesis testing analysis of variance blocking 2k factorial analysis and regression analysis It includes new material using model based systems engineering and systems architecture methods in a system level design application The integration of recent high speed atmospheric turbulence research results in the optical technical examples and case studies to illustrate the new developments is also included A presentation of new optical technical materials for adaptive optics AO and atmospheric turbulence compensation ATC systems that are based on illumination from passive sources natural light or active sources coherent light like from lasers provides the technical focus for the systems engineering methods and techniques Chapter 13 focuses on the technical aspects of the design process and uses the systems level design as an illustration In addition to covering lifecycle cost estimation methods and applying them to an integrated case study that is used to illustrate important concepts and techniques throughout this work the final section brings everything together in terms of technical cost and schedule performance Because this volume blends modern day systems engineering methods with detailed optical systems analysis and applies these methodologies to EO IR systems this new edition is an excellent text for professionals in STEM disciplines that work with optical or infrared systems It s also a great practical reference text for the practicing engineer and a solid educational text for graduate level systems engineering engineering science and technology students

Global Justice, Natural Resources, and Climate Change Megan Blomfield, 2019-05-16 To address climate change fairly many conflicting claims over natural resources must be balanced against one another This has long been obvious in the case of fossil fuels and greenhouse gas sinks including the atmosphere and forests but it is ever more apparent that responses to climate change also threaten to spur new competition over land and extractive resources This makes climate change an instance of a broader more enduring and for many all too familiar problem the problem of human conflict over how the natural world should be cared for protected shared used and managed This work develops a new theory of global egalitarianism concerning natural resources rejecting both permanent sovereignty and equal division which is then used to examine the problem of climate change It formulates principles of resource right designed to protect the ability of all human beings to satisfy their basic needs as members of self determining political communities where it is understood that the genuine exercise of collective self determination is not possible from a position of significant disadvantage in global wealth and power relations These principles are used to address the question of where to set the ceiling on future greenhouse gas emissions and how to share the resulting emissions budget in the face of conflicting claims to fossil fuels climate sinks and land It is also used to defend an unorthodox understanding of responsibility for climate change as a problem of global justice based on its provenance in historical injustice concerning natural resources

Handbook of Terminal Planning Jürgen W. Böse, 2020-09-14 Seaport Container Terminals SCT operate as central nodes in worldwide hub and spoke networks and link ocean going vessels with smaller feeder vessels as well as with inbound

and outbound hinterland transportation systems using road rail or inland waterways The volume of transcontinental container flows has gained enormously over the last five decades frequently leading to double digit annual growth rates for the SCT The 2nd edition of the Handbook of Terminal Planning also deals with problems being induced by questions of terminal development on a long term basis strategic level Facing present and upcoming challenges for SCT operation such as more and more mega vessels extremely high hinterland peaks higher environmental standards less public acceptance and the stronger competition between terminals serving the same hinterland the focus of the book is on successful approaches and solutions primarily addressing the planning of terminal structures Nevertheless operational aspects are considered as well as how they effectively contribute to problem solving on the strategic level

River Flow 2016 George Constantinescu, Marcelo Garcia, Dan Hanes, 2016-06-22 Understanding and being able to predict fluvial processes is one of the biggest challenges for hydraulics and environmental engineers hydrologists and other scientists interested in preserving and restoring the diverse functions of rivers The interactions among flow turbulence vegetation macroinvertebrates and other organisms as well as the transport and retention of particulate matter have important consequences on the ecological health of rivers Managing rivers in an ecologically friendly way is a major component of sustainable engineering design maintenance and restoration of ecological habitats To address these challenges a major focus of River Flow 2016 was to highlight the latest advances in experimental computational and theoretical

approaches that can be used to deepen our understanding and capacity to predict flow and the associated fluid driven ecological processes anthropogenic influences sediment transport and morphodynamic processes River Flow 2016 was organized under the auspices of the Committee for Fluvial Hydraulics of the International Association for Hydro Environment Engineering and Research IAHR Since its first edition in 2002 the River Flow conference series has become the main international event focusing on river hydrodynamics sediment transport river engineering and restoration Some of the highlights of the 8th International Conference on Fluvial Hydraulics were to focus on inter disciplinary research involving among others ecological and biological aspects relevant to river flows and processes and to emphasize broader themes dealing with river sustainability River Flow 2016 extended abstract book 854 pages full paper CD ROM 2436 pages contains the contributions presented during the regular sessions covering the main conference themes and the special sessions focusing on specific hot topics of river flow research and will be of interest to academics interested in hydraulics hydrology and environmental engineering
