In the Dark Fan Zhang,2018-12-12 Electricity shortages are among the biggest barriers to South Asia's development Some 255 million people more than a quarter of the world's grid population live in South Asia and millions of households and firms that are connected experience frequent and long hours of blackouts Inefficiencies originating in every link of the electricity supply chain contribute significantly to the power deficit Three types

of distortions lead to most of the inefficiencies institutional distortions caused by state ownership and weak governance regulatory distortions resulting from price regulation subsidies and cross subsidies and social distortions externalities causing excessive environmental and health damages from energy use Using a common analytical framework and covering all stages of power supply In the Dark identifies and estimates how policy induced distortions have affected South Asian economies The book introduces two innovations First it goes beyond fiscal costs evaluating the impact of distortions from a welfare perspective by measuring the impact on consumer wellbeing producer surplus and environmental costs And second the book adopts a broader definition of the sector that covers the entire power supply chain including upstream fuel supply and downstream access and reliability The book finds that the full cost of distortions in the power sector is far greater than previously estimated based on fiscal cost alone The estimated total economic cost is 4.7 percent of the gross domestic product in Bangladesh India and Pakistan Some of the largest costs are upstream and downstream Few other reforms could quickly yield the huge economic gains that power sector reform would produce By expanding access to electricity and improving the quality of supply power sector reform would also directly benefit poor households The highest payoffs are likely to come from institutional reforms expansion of reliable access and the appropriate pricing of carbon and local air pollution emissions

Sea Level Variability and Change Ivan D. The Average Consumer in Confusion-based Disputes in European Trademark Law and Similar Fictions Rasmus Dalgaard Laustsen, 2019-11-06 This book contends that with regard to the likelihood of confusion standard European trademark law applies the average consumer incoherently and inconsistently To test this proposal it presents an analysis of the horizontal and vertical level of harmonization of the average consumer The horizontal part focuses on similar fictions in areas of law adjacent to European trademark law and in economics and the average consumer in unfair competition law The vertical part focuses on European trademark law

represented mainly by EU trademark law and the trademark laws of the UK Sweden Denmark and Norway The book provides readers with a better understanding of key aspects of European trademark law the average consumer applied as part of the likelihood of confusion standard and combines relevant law and practices with theoretical content and other related areas of law and economics Accordingly it is an asset for policymakers and practitioners as well as general readers with an interest in intellectual property law and theory

The End of Doom Ronald Bailey,2015-07-21 In the past five decades there have been many many forecasts of impending environmental doom They have universally been proven wrong Meanwhile those who have bet on human resourcefulness have almost always been correct In his widely praised book Ecoscam Ronald Bailey strongly countered environmentalist alarmism using facts to demonstrate just how wildly overstated many claims of impending ecological doom really were Now twenty years later the Reason Magazine science correspondent is back to assess the future of humanity and the global biosphere Bailey finds contrary to popular belief that many present ecological trends are quite positive Including Falling cancer incidence rates in the United States The likelihood of a declining world population by mid century The abundant return of agricultural land to nature as the world reaches peak farmland A proven link between increases in national wealth and reductions in air and water pollution Global warming is a problem but the cost of clean energy could soon fall below that of fossil fuels In The End of Doom Bailey avoids polemics and offers a balanced fact based and ultimately hopeful perspective on our current environmental situation Now isn t that a breath of fresh air

The future of food and agriculture: Trends and challenges Food and Agriculture Organization of the United Nations,2018-06-08 How can we achieve FAO s original vision of a world free from hunger and malnutrition The report sheds some light on the nature of the challenges that agriculture and food systems are facing now and throughout the 21st century and provides some insights as to what is at stake and what needs to be done What emerges is that business as usual is no longer an option but calls for major transformations in agricultural systems in rural economies and in how we manage our natural resources The report was undertaken for the quadrennial review of the FAO Strategic Framework and in preparation for the Organization s Medium Term Plan 2018 2021

The Water, Food, Energy and Climate Nexus Felix Dodds,Jamie Bartram,2016-03-31 Global trends of population growth rising living standards and the rapidly increasing urbanized world are increasing the demand on water food and energy Added to this is the growing threat of climate change which will have huge impacts on water and food availability It is increasingly clear that there is no place in an interlinked world for isolated solutions aimed at just one sector In recent years the nexus has emerged as a powerful concept to capture

these inter linkages of resources and is now a key feature of policy making This book is one of the first to provide a broad overview of both the science behind the nexus and the implications for policies and sustainable development It brings together contributions by leading intergovernmental and governmental officials industry scientists and other stakeholder thinkers who are working to develop the approaches to the Nexus of water food energy and climate It represents a major synthesis and state of the art assessment of the Nexus by major players in light of the adoption by the United Nations of the new Sustainable Development Goals and Targets in 2015 With a foreword by HRH the Prince of Wales A Measured Approach to Ending Poverty and Boosting Shared Prosperity World Bank,2014-10-07 In 2013 the World Bank Group adopted two new goals to guide its work ending extreme poverty and boosting shared prosperity More specifically the goals are to reduce extreme poverty in the world to less than 3 percent by 2030 and to foster income growth of the bottom 40 percent of the population in each country While poverty reduction has been a mainstay of the World Bank s mission for decades the Bank has now set a specific goal and timetable and for the first time the Bank has explicitly included a goal linked to ensuring that growth is shared by all The discussion until now has centered primarily on articulating the new goals This report the latest in World Bank s Policy Research Report series goes beyond that and lays out their conceptual underpinnings discusses their relative strengths and weaknesses by contrasting them with alternative indicators and proposes empirical approaches and requirements to track progress towards the goals The report makes clear that the challenges posed by the World Bank Group s new stance extend not just to the pursuit of these goals but indeed to their very definition and empirical content The report also argues that an improved data infrastructure consisting of many elements including the collection of more and better survey data is critical to ensure that progress towards these goals can be measured and policies to help achieve them can be identified and prioritized
