and Emerging Therapies for Epithelial Ovarian Cancer: Basic Research and Clinical Perspectives Stergios Boussios, Eleftherios Pierre Samartzis, Nicholas Pavlidis, J. Alejandro Perez-Fidalgo, 2023-11-06 Epithelial ovarian cancer EOC is the most lethal gynecological disorder due to a lack of effective early detection strategies Worldwide approximately 230 000 women are diagnosed annually whereas 150 000 die It represents the seventh most commonly diagnosed cancer among women in the world with 5 year survival rate of 46% More than one fifth of EOC have been related to hereditary conditions Considerable efforts have been made to implement screening of the general population to diagnose EOC early nevertheless this has been ineffective and there is no approved strategy Nowadays new approaches for early diagnosis and prevention based on molecular genomics are in development Whole genome sequencing has established the potency of the somatic genome characterised with diverse DNA repair deficiencies that can be used to stratify EOCs into distinct biological groups with predictive signatures of resistance or relapse The incorporation of next generation sequencing NGS into clinical practice

remains challenging for two reasons Firstly the EOC risk is not clear for some of the included genes and secondly the variant of uncertain significance rates increase as more genes are analyzed Finally beyond germline pathogenic variants somatic mutations may also affect therapeutic choices and as such upfront tumor sequencing may be equally important to NGS particularly as we continue to challenge treatment paradigms in the first line management of EOC **Critical Energy**

Advances toward improved understanding and treatment of uncommon ovarian cancer types and subtypes

Robb Hollis,Mihaela Carmen Cristea ,Mignon Van Gent,2024-10-22 Ovarian cancer is an umbrella term for a collection of distinct disease entities histotypes Until now the majority of research has focussed on the most common histotype high grade serous ovarian carcinoma HGSOC which accounts for 70% of cases The less common histotypes including endometrioid clear cell mucinous low grade serous carcinosarcoma and non epithelial histotypes have received far less research attention Accordingly while major advances in our understanding of HGSOC have led to molecularly directed therapies that improve patient outcomes progress in less common histotypes has lagged behind Notably many of the uncommon histotypes demonstrate resistance to conventional chemotherapy regimens and their inherent biological differences suggest most are unlikely to respond to emerging molecular therapeutics designed to target the biology of common ovarian cancer types

Zhe-Sheng Chen,Jian-ye Zhang,Yunkai Zhang,Yan-yan Yan,2020-07-22 Characterization of Ore-Forming Systems from Geological, Geochemical and Geophysical Studies K. Gessner,T.G. Blenkinsop,P. Sorjonen-Ward,2018-08-07 Economically viable concentrations of mineral resources are uncommon in Earth s crust Most ore deposits that were mined in the past or are currently being extracted were found at or near Earth s surface often serendipitously To meet the future demand for mineral resources exploration success hinges on identifying targets at depth Achieving this requires accurate and informed

models of the Earth's crust that are consistent with all available geological, geochemical, and geophysical information paired with an understanding of how ore-forming systems relate to Earth's evolving structure. Contributions to this volume address the future resources challenge by i) applying advanced microscale geochemical detection and characterization methods ii) introducing more rigorous 3D Earth models iii) exploring critical behaviour and coupled processes iv) evaluating the role of geodynamic and tectonic setting and v) applying 3D structural models to characterize specific ore-forming systems.
