Soares, 2011-08-31 Covering a wide range of topics on safety reliability and risk management the present publication will be of interest to academics and professionals working in a wide range of scientific industrial and governmental sectors including Aeronautics and Aerospace Chemical and Process Industry Civil Engineering Critical Infrastructures Energy Information Technology and Telecommunications Land Transportation Manufacturing Maritime Transportation Mechanical Engineering Natural Hazards Nuclear Industry Offshore Industry Policy Making and Public Planning □□□□□□□□□□□□□□—□□□□□□□□ □

□□□, 2011-06-01 113 *The Agile Safety Case* Thor Myklebust, Tor Stålhane, 2018-01-29 The safety case SC is one of the railway industry's most important deliverables for creating confidence in their systems This is the first book on how to write an SC based on the standard EN 50129 2003 Experience has shown that preparing and understanding an SC is difficult and time consuming and as such the book provides insights that enhance the training for writing an SC The book discusses both regular safety cases and agile safety cases which avoid too much documentation improve communication between the stakeholders allow quicker approval of the system and which are important in the light of rapidly changing technology In addition it discusses the necessity of frequently updating software due to market requirements changes in requirements and increased cyber security threats After a general introduction to SCs and agile thinking in chapter 1 chapter 2 describes the majority of the roles that are relevant when developing railway signaling systems Next chapter 3 provides information related to the assessment of signaling systems to certifications based on IEC 61508 and to the authorization of signaling systems Chapter 4 then explains how an agile safety plan satisfying the requirements given in EN 50126 1 1999 can be developed while chapter 5 provides a brief introduction to safety case patterns and notations Lastly chapter 6 combines all this and describes how an agile SC can be developed and what it should include To ensure that infrastructure managers suppliers consultants and others can take full advantage of the agile mind set the book includes concrete examples and presents relevant agile practices Although the scope of the book is limited to signaling systems the basic foundations for agile SCs are clearly described so that they can also be applied in other cases *Safety and Reliability of Complex*

*Engineered Systems* Luca Podofillini, Bruno Sudret, Bozidar Stojadinovic, Enrico Zio, Wolfgang Kröger, 2015-09-03 Safety and Reliability of Complex Engineered Systems contains the Proceedings of the 25th European Safety and Reliability Conference

ESREL 2015 held 7-10 September 2015 in Zurich Switzerland Including 570 papers on theories and methods in the area of risk safety and reliability and their applications to a wide range of industrial civil and social sectors this book will be of interest to academics and professionals involved or interested in aspect of risk safety and reliability in various engineering areas

*Safety and performance concept. Reliability assessment of concrete structures* fib Fédération internationale du béton, 2018-08-01 Concrete structures have been built for more than 100 years At first reinforced concrete was used for buildings and bridges even for those with large spans Lack of methods for structural analysis led to conservative and reliable design Application of prestressed concrete started in the 40s and strongly developed in the 60s The spans of bridges and other structures like halls industrial structures stands etc grew significantly larger At that time the knowledge of material behaviour durability and overall structural performance was substantially less developed than it is today In many countries statically determined systems with a fragile behavior were designed for cast in situ as well as precast structures Lack of redundancy resulted in a low level of robustness in structural systems In addition the technical level of individual technologies e.g. grouting of prestressed cables was lower than it is today The number of concrete structures including prestressed ones is extremely high Over time and with increased loading the necessity of maintaining safety and performance parameters is impossible without careful maintenance smaller interventions strengthening and even larger reconstructions Although some claim that unsatisfactory structures should be replaced by new ones it is often impossible as authorities in general have only limited resources Most structures have to remain in service probably even longer than initially expected In order to keep the existing concrete structures in an acceptable condition the development of methods for monitoring inspection and assessment structural identification nonlinear analysis life cycle evaluation and safety and prediction of the future behaviour etc is necessary The scatter of individual input parameters must be considered as a whole This requires probabilistic approaches to individual partial problems and to the overall analysis The members of the fib Task Group 2.8 Safety and performance concepts wrote on the basis of the actual knowledge and experience a comprehensive document that provides crucial knowledge for existing structures which is also applicable to new structures This guide to good practice is divided into 10 basic chapters dealing with individual issues that are critical for activities associated with preferably existing concrete structures Bulletin 86 starts with the specification of the performance based requirements during the entire lifecycle The risk issues are described in chapter two An extensive part is devoted to structural reliability including practical engineering approaches and reliability assessment of existing structures Safety concepts for design consider the lifetime of structures and summarise safety formats from simple partial safety factors to develop approaches suitable for application in sophisticated probabilistic non linear analyses Testing for design and the determination of design values from the tests is an extremely important issue This is especially true for the evaluation of existing structures Inspection and monitoring of existing structures are essential for maintenance for the prediction of remaining service life and for the planning of

interventions Chapter nine presents probabilistically based models for material degradation processes Finally case studies are presented in chapter ten The results of the concrete structures monitoring as well as their application for assessment and prediction of their future behaviour are shown The risk analysis of highway bridges was based on extensive monitoring and numerical evaluation programs Case studies perfectly illustrate the application of the methods presented in the Bulletin The information provided in this guide is very useful for practitioners and scientists It provides the reader with general procedures from the specification of requirements monitoring assessment to the prediction of the structures lifecycles However one must have a sufficiently large amount of experimental and other data e g construction experience in order to use these methods correctly This data finally allows for a statistical evaluation As it is shown in case studies extensive monitoring programs are necessary The publication of this guide and other documents developed within the fib will hopefully help convince the authorities responsible for safe and fluent traffic on bridges and other structures that the costs spent in monitoring are first rather small and second they will repay in the form of a serious assessment providing necessary information for decision about maintenance and future of important structures

Kouider, Graham Paterson, 2015-12-14 With the UK government's 2016 BIM threshold approaching support for small organisations on interpreting filtering and applying BIM protocols and standards is urgently required Many small UK construction industry supply chain firms are uncertain about what Level 2 BIM involves and are unsure about taking first steps towards having BIM capability As digitisation increasingly impacts on work practices Getting to Grips with BIM offers an insight into an industry in change supplemented by practical guidance on managing the transition towards more widespread and integrated use of digital tools to manage the design construction and whole life use of buildings

**Sustainable Value Management-New Concepts and Contemporary Trends** Dariusz Zarzecki, Marek Jabłoński, 2020-12-29 Sustainable value management reveals a new space for studying business models The traditional approach is based on the assumption that the goal of any business is to make money All decisions regarding supply and production should be made to maximize profit The discrepancy in creating non economic value is sometimes the result of separating ownership from control over an enterprise Although shareholders are interested in maximizing profit management that actually makes decisions can also pursue other goals In addition to economic aspects the management intentions of modern managers are also influenced by factors arising from the organizational culture built co created within the organization and sometimes with the participation of external actors such as suppliers and customers The sources of the creation of social values will be the management intentions of top management often initiated by the adopted values and rules on the basis of which resources are bound within the structure of the business model The value of sustainability is based on the identification of those creative sources that relate to economic and social value Economic value is created through social value and vice versa This allows the complementarity of the value created to be mutually supportive The business model that integrates both of these values should be more resistant to crises than the one that is oriented only toward producing economic value Concurrent implementation of economic and social goals increases resilience and affects the success of modern business models This is due to the specificity of the business ecosystem that is built as part of the business model which in essence is based on the use of social factors to merge the business model into a complex ecosystem capable of producing value
