Set the sensitivity appropriate for the application (see options below), replace the front cover, and apply power to the sensor. Right after the LED stops flashing (see the LED operation section). Walk through the detection zones, observing the sensor's LED whenever motion is detected. The red LED shows when it detects motion.

The audible range of all PIR units is subject to variation because of different types of clothing, backgrounds, and ambient temperature. For this reason, expect that the most likely detector motion is well within the PIR's detection zones and that with testing is carried out during these modes.

Note: This is the recommended sensitivity for applications with pet up to 10 kg (22 lb) and set for the Pet Immune lens. It is not recommended for the High Security lens, a more discernible.
