 Extraordinary technological progress, but also the experience gained from the global COVID-19 pandemic, force the future vision of the world's economic development to assume a close coexistence and intense interaction between production, manufacturing and logistics and supply chain management. This perspective requires that the current functioning of organizations will have to be radically remodeled so that they can face not only market competition, but also the turbulent changes, volatility, uncertainty, complexity and ambiguity (VUCA) that take place in their close environment. Therefore, in the next few years, one of the most important tools for improving organizations may become industry audits, especially the logistics audit. This book explores the development methods and impact of logistics audits on organizations. In a holistic way, the book refers to topics such as internal audit, control logistics system of enterprises, principles of conducting logistics audit and its problem areas, risk logistics audit of procurement, production, warehousing, distribution and supply chains, impact of the digital economy on organizations and the European market for logistics audit services. Undoubtedly, the greatest asset of this book is that in international terms it is the first compact book devoted to the issue of logistics audit.
