Archer,Gregory M. Reichberg,Marcelo Sánchez Sorondo,2021-02-12 This open access book examines

recent advances in how artificial intelligence AI and robotics have elicited widespread debate over their benefits and drawbacks for humanity The emergent technologies have for instance implications within medicine and health care employment transport manufacturing agriculture and armed conflict While there has been considerable attention devoted to robotics AI applications in each of these domains a fuller picture of their connections and the possible consequences for our shared humanity seems needed This volume covers multidisciplinary research examines current research frontiers in AI robotics and likely impacts on societal well being human robot relationships as well as the opportunities and risks for sustainable development and peace The attendant ethical and religious dimensions of these technologies are addressed and implications for regulatory policies on the use and future development of AI robotics technologies are elaborated *The Evolution of Human Wisdom* Celia Deane-Drummond, Agustín Fuentes, 2017-10-18 This volume addresses key questions about the puzzle of human origins by focusing on a topic that is largely unexplored thus far namely the evolution of human wisdom How can we best understand the human capacity for wisdom where did it come from and how did it emerge It explores lines of convergence and divergence between Christian theology and evolutionary anthropology in its search to identify different aspects of wisdom Critical to this discussion are the philosophical difficulties that arise when two very different methodological approaches to the manner of humans becoming wise are brought together The relative importance and significance of human language is another area of intense debate in defining the meaning of wisdom and its expression How far and to what extent does a theologically informed wisdom discourse push evolutionary anthropology to formulate new questions and vice versa This volume shows that there is no simple consonance between evolutionary anthropology and theology Yet each discipline has much to learn from the other the authors are in agreement that even in the midst of an awareness of dissonance and some tension there can still be mutual respect The goal of this book is to begin to develop a trans disciplinary approach to the evolution of human wisdom where each discipline is challenged to ask questions in a new way This volume tackles the relationship between theology and science in a fresh way by focusing on a specific theme wisdom that is equally generative for both theology and evolutionary anthropology **Handbook of Research on Administration, Policy, and Leadership in Higher Education** Mukerji, Siran, Tripathi, Purnendu, 2016-09-27 The creation of a sustainable and accessible higher education systems is a pivotal goal in modern society Adopting strategic frameworks and innovative techniques allows institutions to achieve this objective The Handbook of Research on Administration Policy and Leadership in Higher Education is an authoritative reference source for the latest scholarly research on contemporary management issues in educational institutions and presents best practices to improve policies and retain effective governance Addressing the current state of higher education at an international level this book is ideally designed for academicians educational administrators researchers and professionals Scientific Conceptualization and Ontological Difference Dimitri Ginev, 2019-07-22 Ginev works out a conception of the constitution of scientific objects in terms of

hermeneutic phenomenology Recently there has been a revival of interest in hermeneutic theories of scientific inquiry The present study is furthering this interest by shifting the focus from interpretive methods and procedures to the kinds of reflexivity operating in scientific conceptualization According to the book's central thesis a reflexive conceptualization enables one to take into consideration the role which the ontic ontological difference plays in the constitution of scientific objects The book argues for this thesis by analyzing the formation of objects of inquiry in a range of scientific domains stretching from highly formalized domains where the quest for objects identities is carried out in terms of objects emancipation from structures to linguistic and historiographic programs that avoid procedural objectification in their modes of conceptualization The book sets up a new strategy for the dialogue between the theories of scientific inquiry and hermeneutic phenomenology
