withstand various philosophical challenges Apart from a defence of the ascription theory from the objections commonly directed against interpretivism the book provides a critical analysis of major alternative accounts of mental state possession as well as the interpretivist ideas originating from Donald Davidson and Daniel Dennett The viability of the approach is demonstrated by showing how one can treat mental causation as well as the faculties closely connected with consciousness perception and the awareness of one's own mental states in the interpretivist framework Series A

*Introduction to the Physics of Massive and Mixed Neutrinos* Samoil Bilenky, 2018-04-02 Small neutrino masses are the first signs of new physics beyond the Standard Model of particle physics Since the first edition of this textbook appeared in 2010 the Nobel Prize has been awarded for the discovery of neutrino oscillations which shows that neutrinos have mass The measurement of the small neutrino mixing angle  $\theta_{13}$  in 2012 launched the precision stage of the investigation of neutrino oscillations This measurement now allows such fundamental problems as the three neutrino mass spectrum is it normal or inverted and the CP violation in the lepton sector to be tackled In order to understand the origin of small neutrino masses it remains crucial to reveal the nature of neutrinos with definite masses are they Dirac neutrinos possessing a conserved lepton number which distinguishes neutrinos and antineutrinos or are they Majorana neutrinos with identical neutrinos and antineutrinos Experiments searching for the neutrinoless double beta decay are presently under way to answer this fundamental question The second edition of this book comprehensively discusses all these

important recent developments Based on numerous lectures given by the author a pioneer of modern neutrino physics recipient of the Bruno Pontecorvo Prize 2002 at different institutions and schools it offers a gentle yet detailed introduction to the physics of massive and mixed neutrinos that prepares graduate students and young researchers entering the field for the exciting years ahead in neutrino physics
