Bailey,Jan Harff,Dimitris Sakellariou,2017-05-16 This book focuses on issues of method and interpretation in studies of submerged landscapes concentrating on illustrations and case studies from around Europe with additional examples from other parts of the world Such landscapes were once exposed as dry land during the low sea levels that prevailed during the glacial periods that occupied most of the past million years and provided extensive new territories for human exploitation Their study today

involves underwater investigation using techniques and strategies which are clearly set out in these chapters The underwater landscape provides a rich source of information about the archaeology of human settlement and long term changes in environment climate and sea level This book highlights how such information can be revealed and interpreted The examples presented here and the focus on techniques make this book of worldwide relevance Chapters describe examples of underwater archaeological investigation as well as collaboration with offshore industries and legal management and training issues relating to underwater cultural heritage Such studies point to the significance of this drowned landscape and readers are invited to consider its human impact in terms of past settlement and population dispersal through palaeolandscape reconstruction and interpretation in relation to broader themes in human prehistory This volume is based on work from COST Action SPLASHCOS a four year multi disciplinary and multi national research program supported by COST European Cooperation in Science and Technology and has something to benefit all those with an interest in the sea floor of the continental shelf and the archaeological and social impact of sea level change including archaeologists marine scientists geographers cultural heritage managers commercial and governmental organisations policy makers and interested members of the public   **The End of Doom** Ronald Bailey,2015-07-21 In the past five decades there have been many many forecasts of impending environmental doom They have universally been proven wrong Meanwhile those who have bet on human resourcefulness have almost always been correct In his widely praised book Ecoscam Ronald Bailey strongly countered environmentalist alarmism using facts to demonstrate just how wildly overstated many claims of impending ecological doom really were Now twenty years later the Reason Magazine science correspondent is back to assess the future of humanity and the global biosphere Bailey finds contrary to popular belief that many present ecological trends are quite positive Including Falling cancer incidence rates in the United States The likelihood of a declining world population by mid century The abundant return of agricultural land to nature as the world reaches peak farmland A proven link between increases in national wealth and reductions in air and water pollution Global warming is a problem but the cost of clean energy could soon fall below that of fossil fuels In The End of Doom Bailey avoids polemics and offers a balanced fact based and ultimately hopeful perspective on our current environmental situation Now isn t that a breath of fresh air   Climate Change 2014 – Impacts, Adaptation and Vulnerability: Part B: Regional Aspects: Volume 2, Regional Aspects Intergovernmental Panel on Climate Change (IPCC),2014-12-29 This latest Fifth Assessment Report of the Intergovernmental Panel on Climate Change IPCC will again form the standard reference for all those concerned with climate change and its consequences including students researchers and policy makers in environmental science meteorology climatology biology ecology atmospheric chemistry and environmental policy   Media, Environment and the Network Society A.
