Full STEAM Ahead Cherie P. Pandora, Kathy Fredrick, 2017-10-03 This book is a toolkit for youth and young adult librarians, school and public who wish to incorporate science, technology, engineering, art and math (STEAM) into their programs and collections but aren't sure where to begin. Most educators are well aware of the reasons for emphasizing STEAM topics that fall within the broad headings of science, technology, engineering, arts and mathematics in the curriculum regardless of grade level. But how do librarians who work with tweens in middle school, high school and public libraries fit into the picture and play their roles to underscore their relevance in making STEAM initiatives successful? This book answers those key questions, providing program guidelines and resources for each of the STEAM areas. Readers will learn how to collaborate in STEAM efforts by providing information on resources, activities, standards, conferences, museums, programs and professional organizations. Emphasis is placed on encouraging girls and minorities to take part in and get excited about STEAM. In addition, the book examines how makerspaces can enhance this initiative, how to connect your programs to educational standards, where to find funding, how to effectively promote your resources and programs, including how school and public librarians can collaborate to maximize their efforts, how to find and provide professional development and how to evaluate your program to make further improvements and boost effectiveness. Whether you are on the cusp of launching a STEAM initiative or looking for ways to grow and enhance your program, this book will be an invaluable resource.

Theory of Quadsitron-Energy Connectivity Lane B. Scheiber II MD, Lane B. Scheiber ScD, 2019-05-23 The luminous aether a concept known for hundreds of years is the fine essence of the universe Over the last 130 years mainstream science abandoned the knowledge such an aether existed Yet reawakening the principles of a luminous aether as the fabric of space both within our being and surrounding us reaching out in every direction to the very edges of the universe explains many unsolved mysteries The luminous aether is a vast three dimensional ocean of the tiniest and most elemental particles called quadsitrons From the fusion of quadsitrons and energy all else in the universe is constructed The dynamics of quadsitrons interacting with energy accounts for and connects all the micro and macrophenomena that fill our lives such as gravity light electrons atoms molecules and magnetism It is essential we understand and grasp the principles of this wondrous quadsitron energy connectivity in order to advance our technology forward to interstellar travel

Water Resources of Chile

Bonifacio Fernández, Jorge Gironás, 2020-12-03 Chile is a privileged country in terms of water resources with an average annual runoff of approximately 50 000 m³ person However water availability varies enormously in space as less than 1 000 m³ person are available for more than 50% of the population The temporal and spatial distribution of water resources is driven by processes highly variables across a country with different climates explained not only by a large range of latitudes from 17 to 56 south but also the presence of the Pacific Ocean and the Andes with peaks up to 7000 m This geography makes of Chile a true natural laboratory in which water is essential for the society and the economy of the country The relevance of water resources for the country has become even more significant in the context of a mega drought that has affected practically the entire territory in recent years although large floods such as those in Atacama 2015 and 2017 also take place periodically This unique book brings together the state of art knowledge about the hydrology of Chile and its water resources with a particular focus on quantitative aspects The chapters are prepared by many of the most relevant researchers and practitioners working in water resources in the country High quality research contributions on climate and meteorology surface and subsurface hydrology water quality water monitoring water resource and global change among other issues are presented in this unique book which offers a useful guide for academicians researchers practitioners and managers dealing with diverse water related issues in Chile and other regions with similar characteristics
