THE SUMMER SOLSTICE EXPLAINED

Have you noticed how early the sun rises and how late it sets during summer?

The **summer solstice**, around June 21st, marks the peak of summer and the longest day of the year in the Northern Hemisphere. This day occurs because Earth's axis is tilted, causing the sun to be directly overhead at the **Tropic of Cancer**.

WEATHER WONDERS: UNDERSTANDING SUMMER STORMS

Summer storms can be both fascinating and intense. They start when the sun heats the ground unevenly, causing warm, moist air to rise quickly (due to **convection**). This air cools, resulting in **condensation**, forming towering clouds that can lead to thunderstorms with heavy rain and lightning.

Watching a thunderstorm can be an exciting way to learn about the **water cycle**. Have you ever noticed how quickly the weather can change during a summer storm?

Review & Reflect:

1. What safety measures should you take during a thunderstorm?

2. Describe the water cycle and how summer storms fit into it.

Did You Know?

Lightning can heat the air around it to temperatures as high as 50,000 Kelvins, which is about five times hotter than the surface of the sun!

TARGAZING IN SUMMER: WHAT CAN YOU SEE?

Our summer nights are perfect for looking up at the stars. The Earth's rotation and tilt make the center of the **Milky Way** visible, offering a stunning view of stars and planets.

The **Perseids meteor shower** occurs annually between July 17 and August 24, peaking around August 12-13. During this time, you may see many shooting stars.

Review & Reflect:

1. Have you noticed how different the night sky is during different seasons?

2. How does Earth's rotation affect what we see in the night sky?

3. What does the Perseids meteor shower tell us about Earth's atmosphere?
