OPERATION OF RANGE —

1. **Airflow Door Air Control** — Open in full extent when first lighting fire. Close to required amount of air flow required for normal use. Close completely for overnight burning. Experience with various fuels will show to what degree it may be shut.
2. **Direct Damper Over Oven** — Put forward to open. It is only used to bring fire up quickly. Must be pushed fully closed when cooking. Do not leave fully open for long periods.
3. **Flue Ring Damper** — When handle vertical it is fully open and closed when horizontal. This is the control for the range and can be fully closed to bank fire.
4. **Heat Indicator on oven door** is a visual measure of heat rather than a thermometer. In other words, should be treated as such and used in the light of common cooking experience with the range.
5. **Smoking** — Firebox should be fed through the front rather than the top. Fuel should not, if using coal, be allowed to be higher than the side of boiler and need to even. This will give best heat and not cause unnecessary build-up of soot. Greater economy will be achieved. The motto for smoking is "a little more often than a lot at one time".

CLEANING

The air passages in the range and flue must be kept clear. The quality of fuel in use determines how frequently this needs to be done. Poorly installed ranges with poor draft work up more quickly.

Tools For Cleaning

Soot Rake and Flue Brush

1. Flue brush should be used up and down the flue to allow soot to drop to bottom of flue.
2. Soot from top of oven can be brushed off the oven top down through cavity to bottom of range.
3. Using soot rake through soot door at the bottom inside front of range. Soot should be dragged from rear bottom of flue and LH or RH sides of range. It is very important that these passages are kept clear. First sign of blockage is smoke coming from the fire squares and lids.
4. Because of intense heat fire square and lid discoloration can be treated when warm with soft fine fat touch as mutton fat or black foot polish.
