

Classifying Sharks using a Dichotomous Key

A classification system is a way of separating a large group of closely related organisms into smaller subgroups. With such a system, identification of an organism is easy. The scientific names of organisms are based on the classification systems of living organisms.

To classify an organism, scientists often use a **dichotomous key**. A **dichotomous key** is a listing of specific characteristics, such as structure and behavior, in such a way that an organism can be identified through a process of elimination.

In this investigation, it is expected that you:

- 1) Use a key to identify 14 shark families.
- 2) Study the method used in phrasing statements in a key.

Procedure

1. Read sentences 1A and 1B of the key. Then study shark 1 in figure A for the characteristics referred to in 1A and 1B. Follow the directions in these sentences and continue with this process until a family name for Shark 1 is determined.

For example, if the shark has an anal fin, and its body is not kite shaped, following the directions of 1A and go directly to sentence 2. If the shark lacks an anal fin or has a kite shaped body, follow the directions of 1B and go to sentence 10.

2. Continue this process with each shark until all animals have been identified. Write the family name on the line below each animal.
3. Use figure 1 as a guide to the anatomical features used in the key.

Shifting Concepts Teresa Marques,Åsa Wikforss,2020-09-03 Concepts stand at the centre of human cognition We use concepts in categorizing objects and events in the world in reasoning and action and in social interaction It is therefore not surprising that the study of concepts constitutes a central area of research in philosophy and psychology yet only recently have the two disciplines developed greater interaction Recent experiments in psychology that test the role of concepts in categorizing and reasoning have found a great deal of variation across individuals and cultures in categorization behaviour Meanwhile philosophers of language and mind have investigated the semantic properties of concepts and how concepts are related to linguistic meaning and linguistic communication A key motivation behind this was the idea that concepts must be shared across individuals and cultures With the dawn of experimental philosophy the proposal that the experimental data from psychology lacks relevance to semantics is increasingly difficult to defend This volume brings together leading psychologists and philosophers to advance the interdisciplinary debate on the role of concepts in categorizing and reasoning the relationship between concepts and linguistic meaning and communication the challenges conceptual variation poses to communication and the social and political effects of conceptual change **Mercury**
