Classification is a way of separating a large group of closely related organisms into smaller subgroups. With such a system, identification of an organism is easy. The scientific names of organisms are based on the classification systems of living organisms. **The scientific name is made from two taxon (levels of classification): Genus and species.** To classify an organism, scientists often use a dichotomous key. A dichotomous key is a listing of specific characteristics, such as structure and behavior, that allow organisms to be identified through a process of elimination.

*Sharks and Their Relatives, Second Edition* Jeffrey C. Carrier, John A. Musick, Michael R. Heithaus, 2012-04-09 Virtually every area of research associated with sharks and their relatives has been strongly impacted by the revolutionary growth in technology. The questions we can now ask are very different than those reported even two decades ago. Modern immunological and genetic techniques, satellite telemetry and archival tagging, modern phylogenetic analysis, GIS and bomb dating are just a few of the techniques and procedures that have become a part of our investigative lexicon. A modern synthesis of the biology of Chondrichthyans. *Biology of Sharks and Their Relatives Second Edition* discusses significant advances in the development and application of new molecular techniques to the understanding of the phylogenetic relationships among and between these groups. The book considers the effect of global changes on the status of sharks and their relatives and how advances in technology and analytical techniques have changed not only how we approach problem solving and scientific investigations but how we formulate questions. The book also introduces applications of new and novel laboratory devices, techniques and field instruments. This second edition of the award winning and groundbreaking original exploration of the fundamental elements of the taxonomy, systematics, physiology and ecology of sharks, skates, rays and chimaera presents cohesive and integrated coverage of key topics and discusses technological advances used in modern shark research. Offering a well rounded picture for students and researchers and far above competitors in scope and research, this new volume holds a wealth of data on the current status of Chondrichthyan research and provides the basis and springboard for original research. Cover photo by Justin Gilligan. *Atlas and Laboratory Manual for the Dissection of the Shark* William Henry Atwood, 1951. **The Biology of Sharks and Rays** A. Peter Klimley, 2013-07-31 The *Biology of Sharks and Rays* is a comprehensive resource on the biological and physiological characteristics of the cartilaginous fishes: sharks, rays and chimaeras. In sixteen chapters organized by theme, A. Peter Klimley covers a broad spectrum of topics including taxonomy, morphology, ecology and physiology. For example, he explains the body design of sharks and why the ridged toothlike denticles that cover their entire bodies are present on only part of the rays' bodies and are absent from those of chimaeras. Another chapter explores the anatomy of the jaws and the role of the muscles and teeth in jaw extension, seizure and handling of prey. The chapters are richly illustrated with pictures of sharks, diagrams of sensory organs, drawings of the body postures of sharks during threat and reproductive displays and maps showing the extent of the species' foraging range and long distance migrations. Each chapter commences with an anecdote from the author about his own personal experience with the topic, followed by thought provoking questions and a list of recommended readings in the scientific literature. The book will be a useful textbook for advanced ichthyology students as well as an encyclopedic source for those seeking a greater understanding of these fascinating creatures. *Field Guide to Sharks, Rays and Chimaeras of the East Coast of North America* David A.
