Hudson's Bay Company trading territory to the treaty and reserve period that began in Canada in the 1870s. Technological change and the effects of European contact were not uniform throughout North America as Roland Bohr illustrates by comparing the northern Great Plains and the Central Subarctic two adjacent but environmentally different regions of North America and their respective Indigenous cultures. Beginning with a brief survey of the subarctic and Northern Plains environments and the most common subsistence strategies in these regions around the time of contact, Bohr provides the context for a detailed examination of social, spiritual, and cultural aspects of bows, arrows, quivers, and firearms. His detailed analysis of the shifting usage of bows and arrows and firearms in the northern Great Plains and the Central Subarctic makes *Gifts from the Thunder Beings* an important addition to the canon of North American ethnology.

Plant Cell Culture Protocols Víctor M. Loyola-Vargas, Felipe Vázquez-Flota, 2008-02-04. A comprehensive state-of-the-art collection of the most frequently used techniques for plant cell and tissue culture. Readily reproducible and extensively annotated, the methods range from general methodologies such as culture induction, growth, and viability evaluation, and contamination control to such highly specialized techniques as chloroplast transformation involving the laborious process of protoplast isolation and culture. Most of the protocols are currently used in the research programs of the authors or represent important parts of business projects aimed at the generation of improved plant materials. Two new appendices explain the principles for formulating culture media and the composition of the eight most commonly used media formulations and list more than 100 very useful internet sites.

Handbook of Laboratory Animal Anesthesia and Pain Management Chulawat Pacharinsak, Jennifer C. Smith, 2017-03-27. Rodents are the most commonly used species in biomedical research. Individuals conducting rodent research are often responsible to ensure that all areas of anesthesia and analgesia are performed humanely. Anesthetic agent selection, anesthetic monitoring, and postoperative pain assessment and management are essential to the institutional animal care and use program and contribute significantly to the 3Rs by reducing pain and/or distress and refining various procedures. The *Handbook of Laboratory Animal Anesthesia and Pain Management: Rodents* is the first book to capture multiple advances in this important area that greatly impacts various experimental methodologies. Richly illustrated in full color, the book serves as a quick reference source for investigators, veterinarians, technicians, and other animal caretakers charged with the care and use of rodents in a research setting. The unique format of this book also makes it extremely valuable to IACUC members, institutional officials, and occupational health and safety professionals. Key features: Presents practical information in easily accessible bullet point format. Covers anesthetic machine and related equipment, anesthetic management and monitoring, anesthesia and analgesia, pharmacology, euthanasia, and record keeping. Written by well-recognized experts in the laboratory animal community. Provides extensive references to direct the reader to sources for further study of alternative techniques and their procedures.
