1.1| WHAT IS SCIENCE

Word science is originated from Latin word **scientia** which means 'to know'.

Knowledge gained by the humans through observations and experiments when organized systematically is called science.

It is mainly divided into two parts:

1) **Physical Sciences**: Science which deals with non-living things are called physical Sciences.

   For example- physics, chemistry, geography, astronomy astrology, oceanology etc.

2) **Biological Sciences**: Science which deals with the living things are known as biological Sciences.

   For example- botany, zoology, Anthropology, forensic science etc.

1.2| SCIENTIFIC METHODS

As science is a systematic way to explore and understand natural phenomena so it involve flowing scientific methods to understand the phenomena:

(a) Controlled experiments

(b) Qualitative and Quantitative reasoning

(c) Mathematical modeling

(d) Prediction and verification (or falsification) of theories

(e) Speculation or Prediction

Science does not have any final theory. Science is ever dynamic.

For example:

➢ Initially it was considered that Earth is flat but today we know that Earth is spherical.

➢ Geocentric theory suggest that earth is a centre of the universe but today we know that earth is revolving around the sun.

s popular book The theory of nonlinear complex systems has become a successful problem solving approach in the natural sciences from laser physics quantum chaos and meteorology to computer simulations of cell growth in biology It is now recognized that many of our social ecological and political problems are also of a global complex and nonlinear nature And one of the most exciting contemporary topics is the idea that even the human mind is governed largely by the nonlinear dynamics of complex systems In this wide ranging but concise treatment Prof Mainzer discusses in a nontechnical language the common framework behind these endeavors Emphasis is given to the evolution of new structures in natural and cultural systems and we see clearly how the new integrative approach can give insights not available from traditional reductionistic methods   Journal of Education and School World ,1905   Noun-modifying Constructions in Japanese Yoshiko Matsumoto,1997-01-01 This study examines the clausal noun modifying construction NMC in Japanese a much discussed construction that embraces what have usually been called relative clause and noun complement constructions Drawing upon a broad range of naturally occurring NMCs including types that fall outside the domains of relative clause and noun complement constructions Yoshiko Matsumoto argues for an analysis of NMCs that gives an important role to semantics and pragmatics The framework in which this approach is presented draws from and further refines concepts of frame semantics By using a frame semantic definition of semantic integration the author reveals the commonality of diverse types of NMCs in Japanese and posits a tripartite classification of NMCs which is both more comprehensive and more revealing than the traditional dichotomy between relative clause and noun complement constructions As the first comprehensive and systematic study in English of Japanese NMCs with diverse lexical heads this work is further notable for its detailed discussion of the dependence of NMCs on both linguistic and extra linguistic context   *Kindergarten of Fractional Calculus* Shantanu Das,2020-02-18 This book presents a simplified deliberation of fractional calculus which will appeal not only to beginners but also to various applied science mathematicians and engineering researchers The text develops the ideas behind this new field of mathematics beginning at the most elementary level before discussing its actual applications in different areas of science and engineering This book shows that the simple classical laws based on Newtonian calculus which work quite well under limiting and idealized conditions are not of much use in describing the dynamics of actual systems As such the application of non Newtonian or generalized calculus in the governing equations allows the order of differentiation and integration to take on non integer values   *Thoughts Concerning Education in the Works of Georg Christoph Lichtenberg* Svein Oksenholt,2012-12-06 This is an investigation of the thoughts concerning education in the writings of one of the most original educators of the eighteenth century Unappreciated and largely overlooked as was Schopenhauer by the contemporary educators Lichtenberg nevertheless presented his generation and generations to come with some of the most useful a great life aim of Horace Mann suggestions pertaining to education that may possibly be found anywhere in the annals of classical edu cation Beginning with a biographical sketch of Lichtenberg it presents an analysis of his philosophy of education

discusses Lichtenberg s thoughts on pedagogy and curriculum analyzes his conception of morals and religion to the extent that these ideas are specifically related to education examines his notions of educational psychology determines Lichtenberg s views on British education in the eighteenth century compares some of Lichtenberg s educational ideas in the works of contemporary thinkers and educators notably Schopenhauer James and Dewey A concomitant aspect of this book is a portrayal of Lichtenberg as found in his works viz as a student professor philosopher educator moralist psychologist comparative educationist as a searcher for absolute educational truth attainable only in a world to come SVEIN 0KSENHOLT PH D **A History of the Modern Fact** Mary Poovey,2009-11-30 How did the fact become modernity s most favored unit of knowledge How did description come to seem separable from theory in the precursors of economics and the social sciences Mary Poovey explores these questions in A History of the Modern Fact ranging across an astonishing array of texts and ideas from the publication of the first British manual on double entry bookkeeping in 1588 to the institutionalization of statistics in the 1830s She shows how the production of systematic knowledge from descriptions of observed particulars influenced government how numerical representation became the privileged vehicle for generating useful facts and how belief whether figured as credit credibility or credulity remained essential to the production of knowledge Illuminating the epistemological conditions that have made modern social and economic knowledge possible A History of the Modern Fact provides important contributions to the history of political thought economics science and philosophy as well as to literary and cultural criticism *Faith, Physics, and Psychology* John Fitzgerald Medina,2006 In Faith Physics and Psychology John Fitzgerald Medina offers a new understanding of the important role of religion and spirituality in the building of a global society Concord Harvest ,1970
