Thompson,James T. Bryan,1989 This unique atlas contains 236 charts of more than 300 of the brightest galaxies each specifically prepared to facilitate the discovery of supernovae The comparison of these charts with the field seen in a telescope enables any extra galactic supernova to be spotted immediately The proto type set of these charts has already resulted in the discovery of several new supernovae The charts include 345 galaxies printed on translucent paper for use on a lightbox each one carrying an explanation of the constellation in which the galaxy lies special characteristics of the galaxy observing instructions expected maximum brightness for the supernovae in each galaxy and the reference for the sequence A handbook which accompanies the charts describes how to make and record supernova discoveries and reviews the present understanding of supernovae

Handbook of Supernovae Athem W. Alsabti,Paul Murdin,2017-12-08 This reference work gathers all of the latest research

in the supernova field areas to create a definitive source book on supernovae their remnants and related topics It includes each distinct subdiscipline including stellar types progenitors stellar evolution nucleosynthesis of elements supernova types neutron stars and pulsars black holes swept up interstellar matter cosmic rays neutrinos from supernovae supernova observations in different wavelengths interstellar molecules and dust While there is a great deal of primary and specialist literature on supernovae with a great many scientific groups around the world focusing on the phenomenon and related subdisciplines nothing else presents an overall survey This handbook closes that gap at last As a comprehensive and balanced collection that presents the current state of knowledge in the broad field of supernovae this is to be used as a basis for further work and study by graduate students astronomers and astrophysicists working in close related disciplines and established groups
