fabric digital imagery and tattoos as imaginative spaces in which the shadows of secrecy are provocatively outlined **City Planning in India, 1947-2017** Ashok Kumar, Sanjeev Vidyarthi, Poonam Prakash, 2020-07-07 This book is a comprehensive history of city planning in post independence India It explores how the nature and orientation of city planning have evolved in India s changing sociopolitical context over the past hundred or so years The book situates India s experience within a historical framework in order to illustrate continuities and disjunctions between the pre and post independent Indian laws policies and programs for city planning and development It focuses on the development scope and significance of professional planning work in the midst of rapid economic transition migration social disparity and environmental degradation The volume also highlights the need for inclusive planning processes that can provide clean air water and community spaces to large diverse and fast growing communities Detailed and insightful this volume will be of interest to researchers and students of public administration civil engineering architecture geography economics and sociology It will also be useful for policy makers and professionals working in the areas of town and country planning *Dynamics of decision making: from evidence to preference and belief* Erica Yu, David A. Lagnado, 2014-10-24 At the core of the many debates throughout cognitive science concerning how decisions are made are the processes governing the time course of preference formation and decision From perceptual choices such as whether the signal on a radar screen indicates an enemy missile or a spot on a CT scan indicates a tumor to cognitive value based decisions such as selecting an agreeable flatmate or deciding the guilt of a defendant significant and everyday decisions are dynamic over time Phenomena such as decoy effects preference reversals and order effects are still puzzling researchers For example in a legal context jurors receive discrete pieces of evidence in sequence and must integrate these pieces together to reach a singular verdict From a standard Bayesian viewpoint the order in which people receive the evidence should not influence their final decision and yet order effects seem a robust empirical phenomena in many decision contexts Current research on how decisions unfold especially in a dynamic environment is advancing our theoretical understanding of decision making This Research Topic aims to review and further explore the time course of a decision from how prior beliefs are formed to how those beliefs are used and updated over time towards the formation of preferences and choices and post decision processes and effects Research literatures encompassing varied approaches to the time scale of decisions will be brought into scope a Speeded decisions and post decision processes that require the accumulation of noisy and possibly non stationary perceptual evidence e g randomly moving dots stimuli within a few seconds with or without temporal uncertainty b Temporally extended value based decisions that integrate feedback values e g gambling machines and internally generated decision criteria e g when one switches attention selectively between the various aspects of several choice alternatives c Temporally extended belief based decisions that build on the integration of evidence which interacts with the decision maker s belief system towards the updating of the beliefs and the formation of judgments and preferences as in the legal context Research that emphasizes theoretical

concerns including optimality analysis and mechanisms underlying the decision process both neural and cognitive is presented as well as research that combines experimental and computational levels of analysis *The 20th Century Go-N*
