executive function during childhood Yusuke Moriguchi,Philip D Zelazo,Nicolas Chevalier,2016-04-01 Executive function refers to the goal oriented regulation of one s own thoughts actions and emotions Its importance is attested by its contribution to the development of other cognitive skills e g theory of mind social abilities e g peer interactions and academic achievement e g mathematics and by the consequences of deficits in executive function which are observed in wide range of developmental disorders such as attention deficit hyperactivity disorder and autism Over the last decade there have been growing interest in the development of executive function and an expanding body of research has shown that executive function develops rapidly during the preschool years with adult level performance being achieved during adolescence or later This recent work together with experimental research showing the effects of interventions targeting executive function has

yielded important insights into the neurocognitive processes underlying executive function. Given the complexity of the construct of executive function, however, and the multiplicity of underlying processes, there are often inconsistencies in the way that executive function is defined and studied. This inconsistency has hampered communication among researchers from various fields. This Research Topic is intended to bridge this gap and provide an opportunity for researchers from different perspectives to discuss recent advances in understanding childhood executive function. Researchers using various methods, including behavioral experiments, neuroimaging, eye tracking, computer simulation, observational methods, and questionnaires, are encouraged to contribute original empirical research. In addition to original empirical articles, theoretical reviews and opinions, perspective articles on promising future directions are welcome. We hope that researchers from different areas, such as developmental psychology, educational psychology, experimental psychology, neuropsychology, neuroscience, psychiatry, computational science, etc., will be represented in the Research Topic.

Vague Objects and Vague Identity Ken Akiba, Ali Abasnezhad, 2014-03-18. This unique anthology of new contributed essays offers a range of perspectives on various aspects of ontic vagueness. It seeks to answer core questions pertaining to onticism: the view that vagueness exists in the world itself. The questions to be addressed include whether vague objects must have vague identity and whether ontic vagueness has a distinctive logic, one that is not shared by semantic or epistemic vagueness. The essays in this volume explain the motivations behind onticism, such as the plausibility of mereological vagueness and indeterminacy in quantum mechanics, and they offer various arguments both for and against ontic vagueness. Onticism is also compared with other competing theories of vagueness, such as semanticism, the view that vagueness exists only in our linguistic representation of the world. Gareth Evans's influential paper of 1978, "Can There Be Vague Objects," gave a simple but cogent argument against the coherence of ontic vagueness. Onticism was subsequently dismissed by many. However, in recent years, researchers have become aware of the logical gaps in Evans's argument, and this has triggered a new wave of interest in onticism. Onticism is now widely regarded as at least a coherent view. Reflecting this growing consensus, the present anthology, for the first time, puts together essays that are focused on onticism and its various facets, and it fills in the lacuna in the literature on vagueness, a much-discussed subject in contemporary philosophy.

Cognitive Development of Children and Youth Herbert J. Klausmeier, Patricia S. Allen, 2014-05-10. Cognitive Development of Children and Youth: A Longitudinal Study presents a theory of cognitive development, including descriptive information and conclusions based on a longitudinal study. This book discusses the mental operations in concept learning, results pertaining to comparisons between control groups and longitudinal blocks, and operations involving meaningful reception learning at the formal level. The conditions of learning and memory requirements, linguistic relativity hypothesis, invariant sequencing, and rate and form of cognitive development across the school years are also elaborated. This text likewise covers the conditions contributing to rapid and slow cognitive development, longitudinal intervention study, and differences among concepts in age of attainment. This publication is intended for individuals who are

interested in the cognitive development of children and youth as well as upper division and graduate students in psychology educational psychology and education **Beginning Physical Science** Michael Anthony Atherton, Patrick Namasaka, Don Sloan, 1976 **Introductory Physical Science (IPS) Text - 6th Ed** Uri Haber-Schaim, 1994 **Physical Science and Engineering Science, Level 1** James Ellis, 1979 **Holt Physical Science** Mapi M.
