Various options are provided as possible answers to the following questions. Choose the correct answer and write **ONLY** the LETTER (A-D) next to the QUESTION NUMBER (1.1-1.6) on your folio paper. Example 1.7. D.

- 1.1 The graphs below show the relationship between the net force and the acceleration for two masses X and Y.

Which one of the following statements is true?

- A X has a greater mass.
 - B The bodies have equal mass.
 - C Y has a greater mass.
 - D The mass would not affect the gradient of the graph.
- 1.2 In which of the following cases would the resultant force acting on an object be equal to 0N.
- A An object moving with constant acceleration.
 - B When the only force acting on the object is gravitational acceleration.
 - C An object that undergoes equal displacements every second.
 - D An object is moving with increasing acceleration.
- 1.3 Which of the statements below best describes Weightlessness?
- A An object moving at constant velocity upwards from the ground.
 - B An object moving at constant velocity downwards from the ground.
 - C An object that is accelerated upwards away from the ground by a constant applied force.
 - D An object accelerates downwards towards the Earth with an acceleration of $9.8\text{m}\cdot\text{s}^{-2}$.
- 1.4 The inertia of an object ...
- A is greater if its mass is smaller.
 - B increases as the applied force on the object increases.
 - C is the resistance to any change in its state of motion.
 - D increases as the frictional force on the object increases.
- 1.5 An astronaut has a weight F_g on Earth. What distance, in terms of the radius of

Physical Science Test 2013 March:

The Role and Risks of Assumptions in Physical Science Modelling Allan Anforth, 2024-10-11 This book questions the extent to which some physical scientists may have unintentionally misused the English language to varying degrees in arriving at theories that are presented to the world as being statements of fact about the universe The book focuses primarily on large and small scale extremes i e cosmological theories and quantum theories It deals with the core concepts of time and space as they are presented in the theories under consideration As a demonstration of the sensitivity of the outcome of physical modelling to the assumptions made the book presents an alternative cosmological model based on some altered physical assumptions that see the much vaunted inconsistency between General Relativity and Quantum Field Theory disappear

Final Report of the

Committee on a Strategic Plan for U.S. Burning Plasma Research National Academies of Sciences, Engineering, and Medicine, Division on Engineering and Physical Sciences, Board on Physics and Astronomy, Committee on a Strategic Plan for U.S. Burning Plasma Research, 2019-07-01 Fusion offers the prospect of virtually unlimited energy The United States and many nations around the world have made enormous progress toward achieving fusion energy With ITER scheduled to go online within a decade and demonstrate controlled fusion ten years later now is the right time for the United States to develop plans to benefit from its investment in burning plasma research and take steps to develop fusion electricity for the nation's future energy needs At the request of the Department of Energy the National Academies of Sciences Engineering and Medicine organized a committee to develop a strategic plan for U S fusion research The final report's two main recommendations are 1 The United States should remain an ITER partner as the most cost effective way to gain experience with a burning plasma at the scale of a power plant 2 The United States should start a national program of accompanying research and technology leading to the construction of a compact pilot plant that produces electricity from fusion at the lowest possible capital cost

Making Sense of Weather and Climate Mark Denny, 2017-01-17 How do meteorologists design forecasts for the next day's the next week's or the next month's weather Are some forecasts more likely to be accurate than others and why Making Sense of Weather and Climate takes readers through key topics in atmospheric physics and presents a cogent view of how weather relates to climate particularly climate change science It is the perfect book for amateur meteorologists and weather enthusiasts and for anyone whose livelihood depends on navigating the weather's twists and turns Making Sense of Weather and Climate begins by explaining the essential mechanics and characteristics of this fascinating science The noted physics author Mark Denny also defines the crucial differences between weather and climate and then develops from this basic knowledge a sophisticated yet clear portrait of their relation Throughout Denny elaborates on the role of weather forecasting in guiding politics and other aspects of human civilization He also follows forecasting's effect on the economy Denny's exploration of the science and history of a phenomenon we have long tried to master makes this book a unique companion for anyone who wants a complete picture of the environment's individual societal and planetary impact

Interim Report of the Committee on a Strategic Plan for U.S. Burning Plasma Research National Academies of Sciences, Engineering, and Medicine, Division on Engineering and Physical Sciences, Board on Physics and Astronomy, Committee on a Strategic Plan for U.S. Burning Plasma Research, 2018-03-19 In January 2003 President George W Bush announced that the United States would begin negotiations to join the ITER project and noted that if successful ITER would create the first fusion device capable of producing thermal energy comparable to the output of a power plant making commercially viable fusion power available as soon as 2050 The United States and the other ITER members are now constructing ITER with the aim to demonstrate that magnetically confined plasmas can produce more fusion power than the power needed to sustain the plasma This is a critical step towards producing and delivering electricity

from fusion energy Since the international establishment of the ITER project ITER's construction schedule has slipped and ITER's costs have increased significantly leading to questions about whether the United States should continue its commitment to participate in ITER This study will advise how to best advance the fusion energy sciences in the United States given developments in the field the specific international investments in fusion science and technology and the priorities for the next ten years developed by the community and the Office of Fusion Energy Sciences FES that were recently reported to Congress It will address the scientific justification and needs for strengthening the foundations for realizing fusion energy given a potential choice of U S participation or not in the ITER project and develops future scenarios in either case This interim report assesses the current status of U S fusion research and of the importance of burning plasma research to the development of fusion energy as well as to plasma science and other science and engineering disciplines The final report will present strategies that incorporate continued progress toward a burning plasma experiment and a focus on innovation
