Physicalsciences Grade12 Paperpreparatory Exam2014:

Towards a Psychophysiological Approach in Physical Activity, Exercise, and Sports Pedro Forte, Daniel Leite Portella, Diogo Monteiro, José Eduardo Teixeira, 2023-10-30 In recent years there has been an increase in interest in mental health disorders as a result of mediatic coverage of Olympic athletes mental health struggles and also due to the COVID 19 pandemic lockdowns These phenomena helped to further exacerbate a problem already extensively present in sport and society Therefore applying a psychophysiological approach to physical activity exercise and sports research has become very popular Indeed mental fatigue and mental disorders are not only psychological in origin but also require an explanation from a psychophysiological perspective due to the effective interconnection between the psychological and physiological dimensions Psychological variables can also influence performance and the psychophysiological system has a strong effect on the control of physical capacities Moreover pacing behaviour decision making self regulation and effort perception can also explain the role of the brain in physical activity and exercise management Thus the aim of this Research Topic is to share the impact of a psychophysiological approach in physical activity exercise and sports Nuclear Science Abstracts ,1958

scenario frailty and dementia have been triggering special interest both in research and clinical settings due to their high prevalence impact on the individual s quality of life and consequences for public health worldwide These conditions aptly reflect the complexity of age related pathological conditions finding as causal factor a myriad of heterogeneous interacting and often still unclear pathophysiological processes Indeed their study is strongly affected by the difficulty to differentiate the effects of a normal aging process from eventual pathological deviations of the underlying systems Their occurrence and trajectories over time are strongly affected by a wide array of factors and determinants that can be hardly attributed to the deficit involvement of single biological systems and or health domains Moreover environment and social factors also play a key role in the determination of phenotypes The present Research Topic is aimed at widening our understanding of the frailty and dementia phenomena occurring with aging in order to improve the clinical and public health approaches to these burdening conditions
