Revised and significantly expanded the fifth edition of this classic work offers both new and substantially updated information As the definitive reference on fire protection engineering this book provides thorough treatment of the current best practices in fire protection engineering and performance based fire safety Over 130 eminent fire engineers and researchers contributed chapters to the book representing universities and professional organizations around the world It remains the indispensable source for reliable coverage of fire safety engineering fundamentals fire dynamics hazard calculations fire risk analysis modeling and more With seventeen new chapters and over 1 800 figures the this new edition contains Step by step equations that explain engineering calculations Comprehensive revision of the coverage of human behavior in fire including several new chapters on egress system design occupant evacuation scenarios combustion toxicity and data for human behavior analysis Revised fundamental chapters for a stronger sense of context Added chapters on fire protection system selection and design including selection of fire safety systems system activation and controls and CO2 extinguishing systems Recent advances in fire resistance design Addition of new chapters on industrial fire protection including vapor clouds effects of thermal radiation on people BLEVEs dust explosions and gas and vapor explosions New chapters on fire load density curtain walls wildland fires and vehicle tunnels Essential reference appendices on conversion factors thermophysical property data fuel properties and combustion data configuration factors and piping properties Three volume set not available separately

**SFPE Guide to Human Behavior in Fire** Society of Fire Protection Engineers, 2018-11-14 This single resource for the fire safety community distills the most relevant and useful science and research into a consensus based guide whose key factors and considerations impact the response and behavior of occupants of a building during a fire event The Second Edition of SFPE's Engineering Guide Human Behavior in Fire provides a common introduction to this field for the broad fire safety community fire protection engineers fire safety engineers human behavior scientists researchers design professionals and code authorities The public benefits from consistent understanding of the factors that influence the responses and behaviors of people when threatened by fire and the application of reliable methodologies to evaluate and estimate human response in buildings and structures This Guide also aims to lessen the uncertainties in the people components of fire safety and allow for more refined analysis with less reliance on arbitrary safety factors As with fire science in general our knowledge of human behavior in fire is growing but is still characterized by uncertainties that are traceable to both limitation in the science and unfamiliarity by the user communities The concepts for development of evacuation scenarios for performance based designs and the technical methods to estimate evacuation response are reviewed with consideration to the limitation and uncertainty of the methods This Guide identifies both quantitative and qualitative

information that constitutes important consideration prior to developing safety factors exercising engineering judgment and using evacuation models in the practical design of buildings and evacuation procedures Besides updating material in the First Edition this revision includes new information on Incapacitating Effects of Fire Effluent Toxicity Analysis Methods Occupant Behavior Scenarios Movement Models and Behavioral Models Egress Model Selection Verification and Validation Estimation of Uncertainty and Use of Safety Factors Enhancing Human Response to Emergencies Notification of Messaging The prediction of human behavior during a fire emergency is one of the most challenging areas of fire protection engineering Yet understanding and considering human factors is essential to designing effective evacuation systems ensuring safety during a fire and related emergency events and accurately reconstructing a fire
