ict is found at lower levels an additional sophisticated process for avoiding it conflict resolution must be invoked and some extra actions such as waiting for synchronization and detouring may have to be added to the plan The conflict resolution process may become costly or fail Even a single conflict if it is difficult to resolve will result in a plan with considerably lower quality than it otherwise would have As a result in multi agent systems the second or third best plans may result in better overall performance

Bibliography Arthur James Wells, 2007 **Applications and Innovations in Intelligent Systems XVI** Tony Allen, Richard Ellis, Miltos Petridis, 2010-06-07 Swallowing sound recognition is an important task in bioengineering that could be employed in systems for automated swallowing assessment and diagnosis of abnormally high rate of swallowing aerophagia 1 which is the primary mode of ingesting excessive amounts of air and swallowing dysfunction dysphagia 2 5 that may lead to aspiration choking and even death Dysphagia represents a major problem in rehabilitation of stroke and head injury patients In current clinical practice videofluoroscopic swallow study VFSS is the gold standard for diagnosis of swallowing disorders However VFSS is a time consuming procedure performed only in a clinical setting VFSS also results in some radiation exposure Therefore various non invasive methods are proposed for swallowing assessment based on evaluation of swallowing signals recorded by microphones and or accelerometers and analyzed by digital signal processing techniques 2 5 Swallowing sounds are caused

by a bolus passing through pharynx It is possible to use swallowing sounds to determine pharyngeal phase of the swallow and characteristics of the bolus 2
