

Using S.I. units

Specification references

- 2.1.2 a) b) c) d)
- M0.1 Recognise and make use of appropriate units in calculations

Learning outcomes

After completing the worksheet you should be able to:

- show knowledge and understanding of base and derived S.I. units
- use equations to work out derived units
- use base units to check homogeneity of equations.

Introduction

Base quantities are measured in base units. These are units that are not based on other units. For example, mass is measured in kilograms and length is measured in metres. Other quantities have units which are derived from the base quantities. For example, the unit of density (kg m^{-3}) is derived from the kilogram and the metre.

The first example shows you how to use an equation to work out the unit of a derived quantity. The second example shows you how to check that an equation is homogeneous or, in other words, that its units are balanced.

Worked example

Question

What is the S.I. unit of speed?

Answer

Step 1

Identify the equation to use.

Speed is defined as: $\frac{\text{distance travelled}}{\text{time taken}}$

Step 2

Write the equation in terms of units.

The S.I. unit of speed is defined as: $\frac{\text{unit of distance travelled}}{\text{unit of time taken}}$

Step 3

Select the appropriate S.I. base units.

S.I. unit of distance = metre (m)

S.I. unit of time = second (s)
