Cornell Glenn C. Altschuler, Isaac Kramnick, 2014-08-12 In their history of Cornell since 1940 Glenn C Altschuler and Isaac Kramnick examine the institution in the context of the emergence of the modern research university The book examines Cornell during the Cold War the civil rights movement Vietnam antiapartheid protests the ups and downs of varsity athletics the women s movement the opening of relations with China and the creation of Cornell NYC Tech It relates profound fascinating and little known incidents involving the faculty administration and student life connecting them to the Cornell idea of freedom and responsibility The authors had access to all existing papers of the presidents of Cornell which deeply informs their respectful but unvarnished portrait of the university Institutions like individuals develop narratives about themselves Cornell constructed its sense of self of how it was special and different on the eve of World War II when America defended democracy from fascist dictatorship Cornell s fifth president Edmund Ezra

Day and Carl Becker its preeminent historian discerned what they called a Cornell soul a Cornell character a Cornell personality a Cornell tradition and they called it freedom The Cornell idea was tested and contested in Cornell s second seventy five years Cornellians used the ideals of freedom and responsibility as weapons for change and justifications for retaining the status quo to protect academic freedom and to rein in radical professors to end in loco parentis and parietal rules to preempt panty raids pornography and pot parties and to reintroduce regulations to protect and promote the physical and emotional well being of students to add nanofabrication entrepreneurship and genomics to the curriculum and to require language courses freshmen writing and physical education In the name of freedom and responsibility black students occupied Willard Straight Hall the anti Vietnam War SDS took over the Engineering Library proponents of divestment from South Africa built campus shantytowns and Latinos seized Day Hall In the name of responsibility and freedom the university reclaimed them The history of Cornell since World War II Altschuler and Kramnick believe is in large part a set of variations on the narrative of freedom and its partner responsibility the obligation to others and to one s self to do what is right and useful with a principled commitment to the Cornell community and to the world outside the Eddy Street gate

worldwide sources are also included Abstracts and full text are provided if available *Yearbook of International Organizations 2014-2015, Volumes 1a & 1b (Set)* Union of International Associations, 2014-06-16 Volume 1 A and B covers international organizations throughout the world comprising their aims activities and events *Accessions of Unlimited Distribution Reports*, 1972-09 The Filth Disease Jacob Steere-Williams, 2020 Shows how the investigation of local outbreaks of typhoid fever in Victorian Britain led to the emergence of the modern discipline of epidemiology as the leading science of public health Typhoid fever is a food and water borne infectious disease that was insidious and omnipresent in Victorian Britain It was one of the most prolific diseases of the Industrial Revolution There was a palpable public anxiety about the disease in the Victorian era no doubt fueled by media coverage of major outbreaks across the nation but also because Queen Victoria's husband Prince Albert died of the disease in 1861 Their son and heir Prince Albert Edward contracted and nearly succumbed to typhoid a decade later in 1871 *The Filth Disease* shows that typhoid was at the center of a number of critical debates about health science and governance Victorian public health reformers the book argues working in central and local government framed typhoid as the most pressing public health problem in order to persuade local officials to implement sanitary infrastructure to prevent the spread of disease In this period British epidemiologists uncovered how typhoid is spread via food and water supplies disrupting the longstanding idea that typhoid was spread via filth In the process the modern disciple of epidemiology emerged as the chief science of public health Typhoid was as much a social and political problem as it was a scientific one and *The Filth Disease* provides a striking reminder of the cultural context in which infectious diseases strike populations and how scientists study them *The Cloud Revolution* Mark P. Mills, 2021-11-02 The conventional wisdom on how technology will change the future is wrong Mark Mills lays out a radically different and optimistic vision for what's really coming The mainstream forecasts fall into three camps One considers today as the new normal where ordering a ride or food on a smartphone or trading in bitcoins is as good as it's going to get Another foresees a dystopian era of widespread digitally driven job and business destruction A third believes that the only technological revolution that matters will be found with renewable energy and electric cars But according to Mills a convergence of technologies will instead drive an economic boom over the coming decade one that historians will characterize as the Roaring 2020s It will come not from any single big invention but from the confluence of radical advances in three primary technology domains microprocessors materials and machines Microprocessors are increasingly embedded in everything Materials from which everything is built are emerging with novel almost magical capabilities And machines which make and move all manner of stuff are undergoing a complementary transformation Accelerating and enabling all of this is the Cloud history's biggest infrastructure which is itself based on the building blocks of next generation microprocessors and artificial intelligence We've seen this pattern before The technological revolution that drove the great economic expansion of the twentieth century can be traced to a similar confluence one that was first visible in the 1920s a new information

infrastructure telephony new machines cars and power plants and new materials plastics and pharmaceuticals Single inventions don't drive great long cycle booms It always takes convergent revolutions in technology's three core spheres information materials and machines Over history that's only happened a few times We have wrung much magic from the technologies that fueled the last long boom But the great convergence now underway will ignite the 2020s And this time unlike any previous historical epoch we have the Cloud amplifying everything The next long boom starts now
