Patrick Brown,2025-06-30 This guidebook uses an Explore before Explain instructional sequence to help you facilitate the

design of active meaning making lessons in science Author Pat Brown models and breaks down how an Explore before

Explain approach ensures students conceptual understandings are constructed primarily on evidence based experiences in

the classroom From prompting students to ponder patterns helping them identify cause and effect relationships to focusing

on development of their thinking rather than validating ideas you can use Explore before Explain instruction to help your

students feel confident in their thinking and become more self directed learners Chapters focus on developing your students

conceptual science understanding through the investigation of natural occurrences Content and module examples are

provided as well as attention to contemporary standards and safety in science Rather than acting as a prescriptive program

however this book adds another element to your curriculum design showing how lessons can and should include critical

elements of active sensemaking when designing an Explore before Explain sequence In addition the author shows the

benefits of bringing Explore before Explain outside the classroom to create high quality professional and curriculum based

learning This resource is ideal for K 12 science teachers as well as building administrators who are looking for a practice

oriented and research based approach for their science curriculum As a classroom educator you can use these strategies for
