The Art and Craft of Literacy Pedagogy Jennifer Rowsell,2020-05-18 In tracing community and how art and craft can be harnessed to express and manifest communities this book raises fundamental questions and issues about the nature of literacy in everyday lives Threaded throughout the contributions is an abiding belief in the expansive and flexible nature of

literacy which might one moment involve photography in the next drama and in the next invite song coupled with movement. Something happens to literacy when it is seen through multiple modalities of meaning and communication it moves from a thing to a thought and a feeling. Pedagogically the book offers readers a carousel of places and people to witness literacy with from young children all the way to grandparents. This opens up a sense of geography and age proving that literacy really does reside in the centre and corners of our lives. With nine chapters by scholars in Canada, the United Kingdom and the United States all researching under the umbrella of the same research study the collection provides a unique perspective on human and aesthetic communication and shows differences between social groups. Teaching in Special Education Lisa A. Ferrelli, 2009-12-11. Teaching In Special Education: Managing the Chaos addresses the question how do special education teachers function in general education settings. The text describes the experiences of special education teachers in diverse settings at a time when federal law and assessment requirements drive educational policy. Ferrelli uses interviews and observation to tell the stories of six special education teachers as they go about the business of teaching, illuminating the elements of special education teacher practice and documenting the tensions manifested in the interaction between special education and general education teachers. Such tensions create a distinct sense of separation between the practices that constitute special education and those of general education that are typical of American educational policy and practice today. In providing voice for these teachers, this text fills a vacancy in the currently existing studies of teacher practice.

Teaching Together, Learning Together Wolff-Michael Roth, Kenneth George Tobin, 2005. Coteaching and cogenerated dialoguing are ways of learning to teach that truly bridge the gap between theory and praxis as new teachers learn to teach alongside peers and more experienced teachers. These practices are also means of overcoming teacher isolation and burnout. Through cogenerated dialogue sessions, new and experienced teachers, university supervisors, researchers, and administrators are able to create local theory for the purpose of improving teaching and learning. In this book, contributors from four countries report on how coteaching and cogenerated dialoguing worked in their situation.

Converting STEM into STEAM Programs Arthur J. Stewart, Michael P. Mueller, Deborah J. Tippins, 2020-02-27. This book examines the push and pull of factors contributing to and constraining conversion of STEM (science, technology, engineering, and math) education programs into STEAM (science, technology, engineering, math, and arts) education programs. The chapters in this book offer thought-provoking examples, theory, and suggestions about the advantages, methods, and challenges involved in making STEM to STEAM conversions at levels ranging from K12 through graduate university programs. A large driving force for STEM to STEAM conversions is the emerging awareness that the scientific workforce finds itself less than ideally prepared when engaging with so-called wicked problems: the complex suite of emerging multifaceted issues such as global climate change, social injustice, and pandemic diseases. Dealing with these issues requires cross-disciplinary expertise and the ability to insert technical and scientific

understanding effectively into areas of public planning and policy The different models and possibilities for STEAM as the next phase of the STEM revolution laid out in this book will promote research and further our understanding of STEAM as a forward thinking approach to education Gillian Roehrig STEM Education University of Minnesota USA The ideal teacher sees opportunities for integrating ideas from multiple disciplines into every lesson This book offers many worthwhile suggestions on how to do that deliberately and systematically George DeBoer Project 2061 of the American Association for the Advancement of Science USA For the last several years calls for expanding STEM education have grown but so too have concerns about technocratic approaches to STEM This volume challenges the community to consider broader views on STEM by focusing on the place of arts education within this movement The chapters offer much needed new perspectives on the re integration of the arts and sciences Troy Sadler School of Education University of North Carolina USA
