papers presented in these proceedings were carefully reviewed and selected from a total of 5804 submissions. The papers deal with topics such as computer vision, machine learning, deep neural networks, reinforcement learning, object recognition, image classification, image processing, object detection, semantic segmentation, human pose estimation, 3d reconstruction, stereo vision, computational photography, neural networks, image coding, image reconstruction, object recognition, motion estimation.

Applied Physics, System Science and Computers II Klimis Ntalianis, Anca Croitoru, 2018-06-25. This book reports on advanced theories and methods in three related fields of research: applied physics, system science, and computers. It is organized in three parts, the first of which covers applied physics topics including lasers and accelerators, condensed matter, soft matter, and materials science, nanoscience, and quantum engineering, atomic, molecular, optical, and plasma physics, as well as nuclear and high energy particle physics. It also addresses astrophysics, gravitation, earth and environmental science, as well as medical and biological physics. The second and third parts focus on advances in computers and system science, respectively, and report on automatic circuit control, power systems, computer communication, fluid mechanics, simulation, and modeling, software engineering, data structures, and applications of artificial intelligence, among other areas. Offering a collection of contributions presented at the 2nd International Conference on Applied Physics, System Science and Computers APSAC held in Dubrovnik, Croatia, on September 27-29, 2017, the book bridges the gap between applied physics and electrical engineering. It not only presents new methods but also promotes collaborations between different communities working on related topics at the interface between physics and engineering, with a special focus on communication, data modeling, and visualization, quantum information, applied mechanics, as well as bio and geophysics.

Computer Vision - ECCV 2014 Workshops Lourdes Agapito, Michael M. Bronstein, Carsten Rother, 2015-03-18. The four volume set LNCS 8925, 8926, 8927, and 8928 comprises the thoroughly refereed post-workshop proceedings of the Workshops that took place in conjunction with the 13th European Conference on Computer Vision (ECCV 2014) held in Zurich, Switzerland, in September 2014. The 203 workshop papers were carefully reviewed and selected for inclusion in the proceedings. They were presented at workshops with the following themes: where computer vision meets art, computer vision in vehicle technology, spontaneous facial behavior analysis, consumer depth cameras for computer vision, Chalearn: looking at people, pose recovery, action interaction, gesture recognition, video event categorization, tagging and retrieval towards big data, computer vision with local binary pattern variants, visual object tracking challenge, computer vision ontology, applies cross disciplinary technologies, visual perception of affordance and functional visual primitives for scene analysis, graphical models in computer vision, light fields for computer vision, computer vision for road scene understanding and autonomous driving, soft biometrics, transferring and adapting source knowledge in computer vision, surveillance and re-identification, color and photometry in computer vision, assistive computer vision and robotics, computer vision problems in plant phenotyping and non-rigid shape analysis, and deformable image alignment. Additionally, a panel discussion on video segmentation is included.

Energy Research Abstracts , 1993 *Energy Harvesting Systems* Tom J. Kaźmierski, Steve Beeby, 2010-11-01 Kinetic energy harvesting converts movement or vibrations into electrical energy enables battery free operation of wireless sensors and autonomous devices and facilitates their placement in locations where replacing a battery is not feasible or attractive This book provides an introduction to operating principles and design methods of modern kinetic energy harvesting systems and explains the implications of harvested power on autonomous electronic systems design It

describes power conditioning circuits that maximize available energy and electronic systems design strategies that minimize power consumption and enable operation. The principles discussed in the book will be supported by real case studies such as battery less monitoring sensors at water waste processing plants, embedded battery less sensors in automotive electronics and sensor networks built with ultra low power wireless nodes suitable for battery less applications. This book provides managers and leaders with a conceptual framework for visionary leadership to help them rediscover their vision in a more meaningful way with long lasting results. It guides managers and leaders through four overlapping phases of the vision development and realization cycle at different levels and during various life stages. It teaches leaders to embrace employees as visionary partners in the journey to build a better organization. The founder CEO's journey to lead a high growth company begins with the ability to see their role within the company and the company itself through new lenses. While it requires a CEO to evolve and grow with their company as their plans for the company expand, the visionary should not solely set their sights on new horizons. Their ability to see within their company should become more granular as well. Featuring real world case examples and chapter summaries with key takeaways, this book allows the business leader to walk themselves through the process of visioning with their team from start to finish. It also allows consultants and coaches to see the full lifecycle of a vision and support the visionary at any level of an organization.
