1. What is 2-way, 3-way, 4-way matching?

2-way matching:

2-way matching verifies that Purchase order and invoice quantities must match within your tolerances as follows:

Quantity billed $\leq$ Quantity Ordered

Invoice price $\leq$ Purchase order price

($\leq$ sign is used because of tolerances)

Often used for services where no receiver is generated.

3-way matching:

3-way matching verifies that the receipt and invoice information match with the quantity tolerances defined:

Quantity billed $\leq$ Quantity received

4-way matching:

4-way matching verifies that acceptance documents and invoice information match within the quantity tolerances defined:

Quantity billed $\leq$ Quantity accepted.

(Acceptance is done at the time of inspecting goods).

2. Difference between Job hierarchy and position hierarchy? What are the steps involved in setting up Position Hierarchy?

Job hierarchy is used when there is a single approval hierarchy system in the organization compared to Position hierarchy which is used if for the same job, multiple positional approvals are required i.e. Junior **buyer's** requisition needs to be approved by senior **buyer** and senior buyer's requisition is sent to Supply Chain **manager** and then to Finance **manager** for final approval. In Position hierarchy, approval might happen between different positions for the same Job.
