

SUMMARY OF RESULTS

The Antibacterial Resistance Leadership Group (ARLG) seeks to prioritize, design, and execute clinical research that will reduce the public health threat of antibacterial resistance. The ARLG, along with the team of study doctors, scientists, and research coordinators, are pleased to describe the results from the **Rapid Diagnostics in Categorizing Acute Lung Infections (RADICAL)** study.

We appreciate the time and commitment of the research participants who provided blood samples to the RADICAL study and, in doing so, played such an important role in advancing medical science.

WHY WAS THE RESEARCH NEEDED?

Antibiotics are drugs that treat infections caused by bacteria, but they do not work on viruses, such as colds and the flu. Taking antibiotics when you do not need them can be harmful to you. It can also create drug-resistant bacteria, which is a serious public health issue that can lead to antibiotics that do not work and increased health care costs.

Doctors could better know when to prescribe an antibiotic if they had an easy and quick way to diagnose whether it was a virus or bacteria that caused a patient's infection.

Although doctors can use laboratory tests to help identify what's causing the illness, these tests can be slow, inaccurate, and are often unavailable where patients receive care. Rather than trying to test for the presence of a virus or bacteria, the RADICAL study focuses on how patients respond to the infection. This is possible because, the body's immune responses to bacterial and viral infections are different. Specific genes are turned on or off depending on what type of infection you have. This is called gene expression, or gene activity, and measuring this can help doctors know whether the cause of infection is viral or bacterial.

The RADICAL study team collaborated with a company called BioFire to develop an automated, simplified test that would run on the BioFire FilmArray system. By measuring a patient's gene activity, this test could help doctors separate bacterial infections from viral infections accurately and quickly.

DRUG-RESISTANT BACTERIA ARE BACTERIA THAT ARE NOT CONTROLLED OR KILLED BY ANTIBIOTICS.

WHEN WAS THE STUDY CONDUCTED?

in 2014 and

WHO PROVIDED FUNDING FOR THIS STUDY?

Radical Study:

A Fundamental Theological Study of Radical Secularization and its Aftermath Alpo Penttinen, 2024-01-17 In the wake of various secularization processes a growing number of people in Western societies are now describing themselves as non religious But what does this sociological fact really mean for the Church and for society at large Has human religiosity a future after secularization It does this book argues but in a radically altered form Taking its cue from Pope Francis's suggestion that globalizing humanity is presently living through a genuine epochal shift this book presents an original analysis of the transformative effect of secularization on our spiritual predicament in the Western now definitively post Christian world Instead of succumbing to the all too common polarizations in contemporary religious discourse this book aspires to overcome the religious vs secular dichotomy through developing the logic of Radical Secularization arguably the genuine novelty of the particularly Western process of secularization The past homogeneously religious culture is certainly dusking but this only paves the way for the dawn of the future and radically open horizon for our human search for meaning This challenging book will offer intellectual impulses and spiritual incentives to everybody who ponders the future of human religious evolution after secularization
