

Conditional Probability

A box contains 7 good apples and 3 bad apples.

Nick takes two apples at random from the box, without replacement.

- (a) (i) Calculate the probability that both of Nick's apples are bad.

$$\frac{3}{10} \times \frac{2}{9} = \frac{6}{90}$$

- (ii) Calculate the probability that at least one of Nick's apples is good.

$$\begin{array}{ccc} \text{GB} & \text{BG} & \text{GG} \\ \frac{7}{10} \times \frac{3}{9} & + \frac{3}{10} \times \frac{7}{9} & + \frac{7}{10} \times \frac{6}{9} \\ \frac{21}{90} & + \frac{21}{90} & + \frac{42}{90} = \frac{84}{90} \end{array} \quad (4)$$

Another box contains 8 good oranges and 4 bad oranges.

Crysal keeps taking oranges at random from the box one at a time, without replacement, until she gets a good orange.

- (b) Calculate the probability that she takes exactly three oranges.

$$\begin{array}{ccc} \text{B} & \text{B} & \text{G} \\ \frac{4}{12} \times \frac{3}{11} \times \frac{8}{10} & = & \frac{96}{1320} \end{array}$$

There are five shapes:

Four of the shapes are squares and one of the shapes is a circle.
One square is black.
Three squares are white.
The circle is black.
The five shapes are put in a bag.

- (a) Jasmine takes a shape at random from the bag 150 times.
She replaces the shape each time.

Work out an estimate for the number of times she will take a white square.

$$\frac{3}{5} \times 150 = \underline{\underline{90}}$$

- (b) Alex takes a shape at random from the bag and does not replace it.
Becky then takes a shape at random from the bag.

Work out the probability that

- (i) they both take a square.

$$\frac{4}{5} \times \frac{3}{4} = \frac{12}{20}$$

- (ii) they take shapes of the same colour

and other multimedia databases Because of the dramatically increasing amount of multimedia data available there is a growing need for new search techniques that provide not only fewer bits but also the most relevant bits to those searching for multimedia digital data This book serves to bridge the gap between classic ranking of text documents and modern information retrieval where composite multimedia documents are searched for relevant information Multimedia Information Retrieval Content Based Information Retrieval from Large Text and Audio Databases begins to pave the way for speech retrieval only recently has the search for information in speech recordings become feasible This book provides the necessary introduction to speech recognition while discussing probabilistic retrieval and text retrieval key topics in classic information retrieval The book then discusses speech retrieval which is even more challenging than retrieving text documents because word boundaries are difficult to detect and recognition errors affect the retrieval effectiveness This book also addresses the problem of integrating information retrieval and database functions since there is an increasing need for retrieving information from frequently changing data collections which are organized and managed by a database system Multimedia Information Retrieval Content Based Information Retrieval from Large Text and Audio Databases serves as an excellent reference source and may be used as a text for advanced courses on the topic Statistical Benchmarks for Quantum Transport in Complex Systems Mattia Walschaers,2018-07-31 This book introduces a variety of statistical tools for characterising and designing the dynamical features of complex quantum systems These tools are applied in the contexts of energy transfer in photosynthesis and boson sampling In dynamical quantum systems complexity typically manifests itself via the interference of a rapidly growing number of paths that connect the initial and final states The book presents the language of graphs and networks providing a useful framework to discuss such scenarios and explore the rich phenomenology of transport phenomena As the complexity increases deterministic approaches rapidly become intractable which leaves statistics as a viable alternative
