The First Atomic Bomb Janet Farrell Brodie, 2023-06 2024 Southwest Book of the Year On July 16 1945 just weeks before the atomic bombing of Hiroshima and Nagasaki that brought about the surrender of Japan and the end of World War II the United States unleashed the world's first atomic bomb at the Trinity testing site located in the remote Tularosa Valley in south central New Mexico Immensely more powerful than any weapon the world had seen the bomb's effects on the surrounding and downwind communities of plants animals birds and humans have lasted decades In *The First Atomic Bomb* Janet Farrell Brodie explores the history of the Trinity test and those whose contributions have rarely if ever been discussed the men and women who constructed served and witnessed the first test as well as the downwinders who suffered the consequences of the radiation Concentrating on these ordinary people laborers ranchers and Indigenous peoples who lived in the region and participated in the testing Brodie corrects the lack of coverage in existing scholarship on the essential details and everyday experiences of this globally significant event *The First Atomic Bomb* also covers the environmental preservation of the Trinity test site and compares it with the wide range of atomic sites now preserved independently or as part of the new Manhattan Project National Historical Park Although the Trinity site became a significant node for testing the new weapons of the postwar United States it is known today as an officially designated National Historic Landmark Brodie presents a timely important and innovative study of an explosion that carries special historical weight in American memory

Undersea Vehicles and National Needs National Research Council, Division on Engineering and Physical Sciences, Commission on Engineering and Technical Systems, Committee on Undersea Vehicles and National Needs, 1996-12-19 The United States faces decisions requiring information about the oceans in vastly expanded scales of time and space and from oceanic sectors not accessible with the suite of tools now used by scientists and engineers Advances in guidance and control communications sensors and other technologies for undersea vehicles can provide an opportunity to

understand the oceans influence on the energy and chemical balance that sustains humankind and to manage and deliver resources from and beneath the sea This book assesses the state of undersea vehicle technology and opportunities for vehicle applications in science and industry It provides guidance about vehicle subsystem development priorities and describes how national research can be focused most effectively **Orissa Gazette** Odisha (India),1963 *Report Number Series Used by the Office of Technical Information in Cataloging Reports* U.S. Atomic Energy Commission,1960 **Research Summary** Jet Propulsion Laboratory (U.S.),1960 *Nuclear Safety* ,1961 Nuclear Science Abstracts ,1975 **How We Teach Science** John L. Rudolph,2019-06-01 A former Wisconsin high school science teacher makes the case that how and why we teach science matters especially now that its legitimacy is under attack Why teach science The answer to that question will determine how it is taught Yet despite the enduring belief in this country that science should be taught there has been no enduring consensus about how or why This is especially true when it comes to teaching scientific process Nearly all of the basic knowledge we have about the world is rock solid The science we teach in high schools in particular laws of motion the structure of the atom cell division DNA replication the universal speed limit of light is accepted as the way nature works Everyone also agrees that students and the public more generally should understand the methods used to gain this knowledge But what exactly is the scientific method Ever since the late 1800s scientists and science educators have grappled with that question Through the years they ve advanced an assortment of strategies ranging from the laboratory method to the five step method to science as inquiry to no method at all How We Teach Science reveals that each strategy was influenced by the intellectual cultural and political circumstances of the time In some eras learning about experimentation and scientific inquiry was seen to contribute to an individual s intellectual and moral improvement while in others it was viewed as a way to minimize public interference in institutional science John Rudolph shows that how we think about and teach science will either sustain or thwart future innovation and ultimately determine how science is perceived and received by the public Resources in Education ,1988-11 Ancillary materials United States. Advisory Committee on Human Radiation Experiments,1995 *Final Report: Ancillary materials* United States. Advisory Committee on Human Radiation Experiments,1995 **Hitler's Uranium Club** Jeremy Bernstein,2013-03-09 From April through December of 1945 ten of Nazi Germany s greatest nuclear physicists were detained by Allied military and intelligence services in a kind of gilded cage at Farm Hall an English country manor near Cambridge The physicists knew the Reich had failed to develop an atomic bomb and they soon learned from a BBC radio report on August 6 that the Allies had succeeded in their own efforts to create such a weapon But what they did not know was that many of their meetings and private conversations were being monitored and recorded by British agents This book contains the complete collection of transcripts that were made from these secret recordings providing an unprecedented view of how the German scientists including two Nobel Laureates thought and spoke about their roles during the war Publication Catalog of the U.S. Department of Health and Human Services United
