Weimar Culture And Quantum Mechanics: Selected Papers By Paul Forman And Contemporary Perspectives On The Forman Thesis Alexei B Kojevnikov, Cathryn Carson, Helmuth Trischler, 2011-05-11. This volume reprints Paul Forman's classic papers on the history of the scientific profession in post World War I Germany and the invention of quantum mechanics. The Forman thesis became famous for its demonstration of the cultural conditioning of scientific knowledge in particular by showing the historical connection between the culture of Weimar Germany known for its irrationality and antisocialism and the emerging concept of quantum acausality. From the moment of its publication Forman's research provoked intense historical and philosophical debates. In 2007 participants at an international conference in Vancouver Canada discussed the implications of the Forman thesis for contemporary historiography. Their contributions collected in this volume represent cutting edge research on the history of the quantum revolution and of German science.

Gender Inclusive Engineering Education Julie Mills, Mary Elizabeth Ayre, Judith Gill, 2011-02-09. Women continue to comprise a small minority of students in engineering education and subsequent employment despite the numerous initiatives over the past 25 years to attract and retain more women in engineering. This book demonstrates the ways in which traditional engineering education has not attracted supported or retained female students and identifies the issues needing to be addressed in changing engineering education to become more gender inclusive. This innovative and much needed work also addresses how faculty can incorporate inclusive curriculum within their courses and programs and provides a range of exemplars of good practice in gender inclusive engineering education that will be immediately useful to faculty who teach engineering students.

Cost-Benefit Analysis of the African Risk Capacity Facility Daniel J. Clarke, Ruth Vargas Hill, 2013-11-01

Governments play a key role in supporting populations affected by natural disasters including rebuilding infrastructure to ensure continued services and scaling up public safety nets to prevent widespread hunger and poverty However the traditional approach of limiting greater spending to the aftermath of a disaster has many drawbacks External support from bilateral or multilateral donors can be slow and unreliable Private sector reinsurance can be prohibitively expensive And reallocating budgets toward recovery and reconstruction is typically a slow process that can even hurt long term development by drawing resources away from effective programs Some countries are trying to mitigate this liability by banding together and creating sovereign catastrophe risk pools that allow governments to coordinate with one another to insure their uncertain fiscal liabilities at lower cost Countries contribute to the pool which then provides payments if an insured natural disaster strikes The African Risk Capacity ARC has been proposed as a pan Africa drought risk pool to insure against drought risk in Africa south of the Sahara If fully operationalized the ARC will mark a major change in how donors

fund emergency support to countries in Africa during times of need In this paper we undertake a cost benefit analysis of the ARC pool and discuss how lessons can inform the design of the ARC
