An Introduction to the Green Economy Adrian C. Newton, Elena Cantarello, 2014-08-13
The green economy is widely seen as a potential solution to current global economic and environmental crises and a potential mechanism by which sustainable development might be achieved in practice. Considerable investments are now being made into the development of green technology, renewable energy, biodiversity conservation, resource efficiency, recycling of materials and green infrastructure. This textbook provides a comprehensive introduction to the green economy using a strongly interdisciplinary approach based on environmental science rather than treating it as a sub set of economics. The scientific principles of sustainability are presented which provide the foundations of the green economy with a particular focus on systems based approaches. Examples of real world case studies are used to illustrate how the green economy can be achieved in practice. In this way the authors provide a thorough overview of both the principles and practice of the green economy drawing from a wide range of disciplines including ecology, geography, social science, psychology, sustainability science, environmental science, law and economics. The emphasis is on presenting results of the latest research derived from leading scientific journals. Rather than focusing on a single definition of what constitutes a green economy, the book introduces readers to the diversity of opinion that exists and engages them in what is an active on going debate. This reflects the fact that many aspects of the green economy and sustainable development more generally are currently contested. In particular, the book will help readers to strengthen their ability to critically evaluate the evidence for and against the views presented and to actively contribute to the future development of the green economy.

World Development Report 2015 World Bank, 2014-12-04 Development economics and policy are due for a redesign In the past few decades research from across the natural and social sciences has provided stunning insight into the way people think and make decisions Whereas the first generation of development policy was based on the assumption that humans make decisions deliberatively and independently and on the basis of consistent and self interested preferences recent research shows that decision making rarely proceeds this way People think automatically when deciding they usually draw on what comes to mind effortlessly People also think socially social norms guide much of behavior and many people prefer to cooperate as long as others are doing their share And people think with mental models what they perceive and how they interpret it depend on concepts and worldviews drawn from their societies and from shared histories The World Development Report 2015 offers a concrete look at how these insights apply to development policy It shows how a richer view of human behavior can help achieve development goals in many areas

including early childhood development household finance productivity health and climate change It also shows how a more subtle view of human behavior provides new tools for interventions Making even minor adjustments to a decision making context designing interventions based on an understanding of social preferences and exposing individuals to new experiences and ways of thinking may enable people to improve their lives The Report opens exciting new avenues for development work It shows that poverty is not simply a state of material deprivation but also a tax on cognitive resources that affects the quality of decision making It emphasizes that all humans including experts and policy makers are subject to psychological and social influences on thinking and that development organizations could benefit from procedures to improve their own deliberations and decision making It demonstrates the need for more discovery learning and adaptation in policy design and implementation The new approach to development economics has immense promise Its scope of application is vast This Report introduces an important new agenda for the development community **Turn Down the Heat** World Bank Publications,2014-11-20 A Report for the World Bank by the Potsdam Institute for Climate Impact Research and Analytics

Arctic ice shelves ice islands and related features Ice shelves are permanent areas of ice which float on the ocean surface while attached to the coast and typically occur in very cold environments where perennial sea ice builds up to great thickness and or where glaciers flow off the land and are preserved on the ocean surface These landscape features are relatively poorly studied in the Arctic yet they are potentially highly sensitive indicators of climate change because they respond to changes in atmospheric oceanic and glaciological conditions Recent fracturing and breakup events of ice shelves in the Canadian High Arctic have attracted significant scientific and public attention and produced large ice islands which may pose a risk to Arctic shipping and offshore infrastructure Much has been published about Antarctic ice shelves but to date there has not been a dedicated book about Arctic ice shelves or ice islands This book fills that gap

under which they are most likely to take appropriate protective action. Some but not all of these results have been used to inform the design and operation of alert and warning systems, and new insights continue to emerge. Emergency Alert and Warning Systems reviews the results of past research, considers new possibilities for realizing more effective alert and warning systems, explores how a more effective national alert and warning system might be created, and some of the gaps in our present knowledge, and sets forth a research agenda to advance the nation's alert and warning capabilities.
