Ancient Pathways, Ancestral Knowledge Nancy J. Turner, 2014-06-01 Volume 1 The History and Practice of Indigenous Plant Knowledge Volume 2 The Place and Meaning of Plants in Indigenous Cultures and Worldviews Nancy Turner has studied Indigenous peoples knowledge of plants and environments in northwestern North America for over forty years In Ancient Pathways Ancestral Knowledge she integrates her research into a two volume ethnobotanical tour de force Drawing on information shared by Indigenous botanical experts and collaborators the ethnographic and historical record and from linguistics palaeobotany archaeology phytogeography and other fields Turner weaves together a complex understanding of the traditions of use and management of plant resources in this vast region She follows Indigenous inhabitants over time and through space showing how they actively participated in their environments managed and cultivated valued plant resources and maintained key habitats that supported their dynamic cultures for thousands of years as well as how knowledge was passed on from generation to generation and from one community to another To understand the values and perspectives that have guided Indigenous ethnobotanical knowledge and practices Turner looks beyond the details of individual plant species and their uses to determine the overall patterns and processes of

their development application and adaptation Volume 1 presents a historical overview of ethnobotanical knowledge in the region before and after European contact The ways in which Indigenous peoples used and interacted with plants for nutrition technologies and medicine are examined Drawing connections between similarities across languages Turner compares the names of over 250 plant species in more than fifty Indigenous languages and dialects to demonstrate the prominence of certain plants in various cultures and the sharing of goods and ideas between peoples She also examines the effects that introduced species and colonialism had on the region s Indigenous peoples and their ecologies Volume 2 provides a sweeping account of how Indigenous organizational systems developed to facilitate the harvesting use and cultivation of plants to establish economic connections across linguistic and cultural borders and to preserve and manage resources and habitats Turner describes the worldviews and philosophies that emerged from the interactions between peoples and plants and how these understandings are expressed through cultures stories and narratives Finally she explores the ways in which botanical and ecological knowledge can be and are being maintained as living adaptive systems that promote healthy cultures environments and indigenous plant populations Ancient Pathways Ancestral Knowledge both challenges and contributes to existing knowledge of Indigenous peoples land stewardship while preserving information that might otherwise have been lost Providing new and captivating insights into the anthropogenic systems of northwestern North America it will stand as an authoritative reference work and contribute to a fuller understanding of the interactions between cultures and ecological systems

Deep-ocean climate change impacts on habitat, fish and fisheries Food and Agriculture Organization of the United Nations,2019-03-22 This publication presents the outcome of a meeting between the FAO UNEP ABNJ Deep seas and Biodiversity project and the Deep Ocean Stewardship Initiative It focuses on the impacts of climatic changes on demersal fisheries and the interactions of these fisheries with other species and vulnerable marine ecosystems Regional fisheries management organizations rely on scientific information to develop advice to managers In recent decades climate change has been a focus largely as a unidirectional forcing over decadal timescales However changes can occur abruptly when critical thresholds are crossed Moreover distribution changes are expected as populations shift from existing to new areas Hence there is a need for new monitoring programmes to help scientists understand how these changes affect productivity and biodiversity The principal cause of climate change is rising greenhouse gases and other compounds in the atmosphere that trap heat causing global warming leading to deoxygenation and acidification in the oceans Three dimensional fully coupled earth system models are used to predict the extent of these changes in the deep oceans at 200 2500 m depth Trends in changes are identified in many variables including temperature pH oxygen and supply of particulate organic carbon POC Regional differences are identified indicating the complexity of the predictions The response of various fish and invertebrate species to these changes in the physical environment are analysed using hazard and suitability modelling Predictions are made to changes in distributions of commercial species though in practice the processes governing population abundance

are poorly understood in the deep sea environment and predicted distributional changes are not always as expected and may be manifested as simple disappearance of species or ecosystems The publication underscores the fact adaptive monitoring and management mechanisms must be in place to ensure that fisheries are sustainable and the environment remains healthy and productive Suggestions are provided as to the actions necessary **Speculative Realism** Peter Gratton, 2014-09-25

Geology's Significant Sites and their Contributions to Geoheritage R. M. Clary, E. J. Pyle, W. M. Andrews, 2024-07-23 The contributions in this book explore several geologically significant sites and in doing so acknowledge and explore not just the geological exposures themselves but also the people and issues that are fundamentally intertwined with the history of our science and its impact on our society Through selective examples of outcrops and locales integral to the history of geology we explore the evolution of modern geology as well as the geodiversity and geoheritage of our planet While the volume is far from comprehensive the chapters contained herein detail a range for geoheritage value scale of geoheritage sites and potential for geoheritage opportunities that will promote a broader richer understanding of the complexity of the geoheritage of Earth Importantly many chapters offer a cautionary tale of sites almost lost to posterity and submit their take away lessons for community mobilization towards geoheritage site protection

Unmaking the Bomb Shannon Cram, 2023-10-10 Unmaking the Bomb investigates the politics of waste exposure and cleanup at the Hanford Nuclear Reservation a former weapons complex in Washington State Once the heart of American plutonium production Hanford is now engaged in the nation s largest environmental remediation effort managing toxic materials that will long outlast their regulatory containers This book blends ethnographic research with personal narrative to examine cleanup s administrative frames and the stories that exceed them It describes how the body at risk became a waste management tool and how reckoning with contamination informs the very definitions of health and hazard in the United States
