Plastics in the Circular Economy Vincent Voet, Jan Jager, Rudy Folkersma, 2021-03-22 We cannot imagine a world without plastics Plastic products make our daily life safe healthy and convenient Besides all the benefits the current plastics economy gives rise to environmental concerns with respect to fossil oil depletion and plastic waste accumulation In a circular economy however plastics can be redesigned for reusability and recyclability This book makes the topic of sustainable plastics approachable for students and career starters alike describing the nature and chemistry of bio polymers as well as how to create a closed loop of plastic materials

*Handbook of Advanced Industrial and Hazardous Wastes Treatment* Lawrence K. Wang, Yung-Tse Hung, Nazih K. Shammass, 2009-11-04 This authoritative reference for technical information on industrial and hazardous waste treatment provides broad comprehensive coverage of basic and advanced principles and applications It addresses wastes in a variety of industries including metal finishing food processing milk production foundries and chemical manufacturing Complete with numerous figures tables examples and case histories the text explores new methods of clean production and waste minimization and addresses the treatment of landfills and underground storage tanks

*Plant-produced Microbial Vaccines* Alexander V. Karasev, 2009-04-29 In recent years plants have been increasingly explored for production of biomedicines and vaccine components The two main advantages of plant systems are low cost and a greater potential for scalability as compared to

microbial or animal systems An additional advantage from the public health point of view is high safety compared to animal systems which is important for vaccine production there are no known plant pathogens capable of replicating in animals and in humans in particular A particular antigen or a protein has to be expressed in a plant using one of many available platforms this antigen protein subsequently needs to be purified or processed and later formulated into a vaccine or a therapeutic these need to be delivered to a human or animal body via an appropriate route Naturally all these vaccines and therapeutics must be subjected to regulatory approvals prior to their use Thus the challenge is to adapt plant based platforms for production of cost efficient biomedical products that can be approved by FDA for use as vaccine components or therapeutics which will be competitive against existing vaccines and drugs This volume attempts to address the entire spectrum of challenges facing the nascent field of plant based biomedical products from the selection of an appropriate production platform to specific methods of downstream processing and regulatory approval issues      The Adoption and Diffusion of Imported Technology J.L.

Enos, W.-H. Park, 2018-10-29 This book first published in 1988 considers the problems that developing countries face when importing technology from abroad The major issues technical economic political are analysed in the case of one particular country Korea The book describes the negotiations with the foreign companies that controlled the desired technology the building of the plants the training of engineers and managers to replace expatriates the improvements of processes and products and the maintenance of efficient and profitable production In their research the authors were given access to information usually kept confidential government memoranda and minutes company contacts and records costs and prices The book also considers how typical of the developing countries Korea is and the authors make certain policy recommendations for the future      Value Stream Mapping for the Process Industries Peter L.
