Xavier Malcata, 2020-12-13 Food Process Engineering Safety Assurance and Complements pursues a logical sequence of coverage of industrial processing of food and raw material where safety and complementary issues are germane Measures to guarantee food safety are addressed at start and the most relevant intrinsic and extrinsic factors are reviewed followed by description of unit operations that control microbial activity via the supply of heat supply or the removal of heat Operations prior and posterior are presented as is the case of handling cleaning disinfection and rinsing and effluent treatment and packaging complemented by a brief introduction to industrial utilities normally present in a food plant Key Features Overviews the technological issues encompassing properties of food products Provides comprehensive mathematical simulation of food processes Analyzes the engineering of foods at large and safety and complementary operations in particular with systematic derivation of all relevant formulae Discusses equipment features required by the underlying processes

Finite Physical Dimensions Optimal Thermodynamics 1 Michel Feidt, 2017-08-28 Energy and the environment are inextricably linked to the economy

Thermodynamics therefore seems to be a privileged tool in overcoming the constraints associated with optimization This first volume reports on an original contemporary approach leading to optimal solutions in the form of trend models proving the existence of solutions which can then be refined in a more complete and sophisticated manner The validation of the proposed methodology is realized through real life examples engines heat pumps refrigeration systems etc However the more fundamental aspects linked to the dynamics of the transfer and conversion of energy and matter are also explored as well as the evolution which characterizes the second law of thermodynamics This book presents recent advances often still undergoing research as well as structured exercises and is therefore aimed at both students and researchers in the field of energetics It proposes a view of the evolution of knowledge regarding the thermodynamics modeling of systems and processes It shows results and also the existence of optimum all and along the development It focuses on multidisciplinary approach that characterizes thermodynamics
