also burgeoned The overarching goal of these approaches is to avoid regrettable substitutions which occur when a toxic chemical is replaced by another chemical that later proved unsuitable because of persistence bioaccumulation toxicity or other concerns Chemical alternative assessments are tools designed to facilitate consideration of these factors to assist stakeholders in identifying chemicals that may have the greatest likelihood of harm to human and ecological health and to provide guidance on how the industry may develop and adopt safer alternatives A Framework to Guide Selection of Chemical Alternatives develops and demonstrates a decision framework for evaluating potentially safer substitute chemicals as primarily determined by human health and ecological risks This new framework is informed by previous efforts by regulatory agencies academic institutions and others to develop alternative assessment frameworks that could be operationalized In addition to hazard assessments the framework incorporates steps for life cycle thinking which considers possible impacts of a chemical at all stages including production use and disposal as well as steps for performance and economic assessments The report also highlights how modern information sources such as computational modeling can supplement traditional toxicology data in the assessment process This new framework allows the evaluation of the full range of benefits and shortcomings of substitutes and examination of tradeoffs between these risks and factors such as product functionality product efficacy process safety and resource use Through case studies this report demonstrates how different users in contrasting decision contexts with diverse priorities can apply the framework This report will be an essential resource to the chemical industry environmentalists ecologists and state and local governments

Modified Mass-spring System for Physically Based Deformation Modeling Oussama Jarrousse, 2014-09 Mass spring systems are considered the simplest and most intuitive of all deformable models They are computationally efficient and can handle large deformations with ease But they suffer several intrinsic limitations In this book a modified mass spring system for physically based deformation modeling that addresses the limitations and solves them elegantly is presented Several implementations in modeling breast mechanics heart mechanics and for elastic images registration are presented

Special Topics in Earthquake Geotechnical Engineering Mohamed A. Sakr, Atilla Ansal, 2012-02-27 Geotechnical Earthquake Engineering and Soil Dynamics as well as their interface with Engineering Seismology Geophysics and Seismology have all made remarkable progress over the past 15 years mainly due to the development of instrumented large scale experimental facilities to the increase in the quantity and quality of recorded earthquake data to the numerous well documented case studies from recent strong earthquakes as well as enhanced computer capabilities One of the major factors contributing to the aforementioned progress is the increasing social need for a safe urban environment large infrastructures and essential facilities The main scope of our book is to provide the geotechnical engineers geologists and seismologists with the most recent advances and developments in the area of earthquake geotechnical engineering seismology and soil dynamics

monograph provides an overview of the principles required for a service orientation in the management of irrigation and drainage systems The material covered is designed to emphasize an area largely neglected in the irrigation and drainage management literature The dominating philosophy underlying this book is that irrigation and drainage systems must be managed as a service business responsive to the needs and changing requirements of its customers It is postulated that this service approach to the management of irrigation and drainage systems constitutes a key element of the strategy that is needed to improve the current level of performance of many irrigation and drainage systems worldwide Enhanced performance of irrigation is a prerequisite if we are to face the enormous challenge of producing greater quantities of food to meet the demand of a growing population This is particularly the case in an environment with increasing competition for water from industry and urban water users set against mounting concerns about environmental sustainability
